STOR24

Facilities Manager Operator Manual

Site readiness, maintenance, arrivals and reliable cover

A practical beginner's guide | 21 October 2026 | Edition 4

Staff portal: https://portal.stor24.co.za

Read the first five sections before doing live work. Then open the workflow you need from the clickable contents.

STOP	Use your own account and assigned store. Never create live practice payments, agreements or access commands.

Internal staff training copy. Keep customer records and downloaded files private.

Contents

Outage, recovery and end of shift 32

Safe practice and trainer check 33

Edition notes and current limits 34

Quick-reference card 35

1. What this manual is for

For the facilities manager and authorised site cover. Use this guide to record real site work, manage maintenance and prepare safe, accurate arrival handovers.

Who this is for

Site readiness, maintenance, arrivals and reliable cover

How to use the visual cues

Cue	Meaning
CHECK	Confirm the saved result before moving on.
STOP	Do not continue until a blocker or approval is resolved.
WAIT	A setup, source or approval is still required.
TIP	A useful way to work more clearly.
YOU ARE HERE	The diagram begins at the start of this workflow. Follow its numbered steps.

What a successful step looks like

A success banner means the request received a response. Reopen or reload the exact saved record to check the intended result. Check the customer, store, status and relevant amount/date.

> TIP Diagrams explain the route. Screenshots show where controls were positioned on the capture date. Your account may show fewer actions.

Screenshots and this edition

Screenshots are retained captures from 15-17 October 2026. Captions distinguish live empty forms from actual-component examples with fictitious data. They are not fresh production screenshots. Sign-in now requires an authenticator, and later layouts may differ. Never copy example customer details into live records.

2. Your role and approval limits

This manual describes facilities duties. The standard Facility manager role has broad store, operations, inventory, daily-close and access-management capabilities. A specific named manager assignment has not been verified for this edition. Use only your actual store and approved duties; a technical grant is not a provider or policy approval.

Work within your role

Review site tasks; record maintenance; check units and maps; prepare arrivals; acknowledge cover; handle permitted stock work; review permitted operational reports.

Who to ask

Faeez for booking and customer changes; finance for payments and charges; the designated access operator for door actions; owner for permissions, provider configuration and staff onboarding.

Decision	Authority boundary
Booking price	CS operator proposes. An explicitly authorised booking-price approver decides. Customer acceptance follows separately.
Money and refunds	Use evidence and the required independent finance process. A price-approval grant does not grant these approvals.
Physical access	Use the designated access operator and approved policy. Saved readiness is not proof the door works.
Staff access / setup	Organisation owner or designated administrator. Never borrow an account.

WAIT Provider setup, real delivery, financial/source acceptance, physical devices and staff training remain separate. This manual does not close those gates.

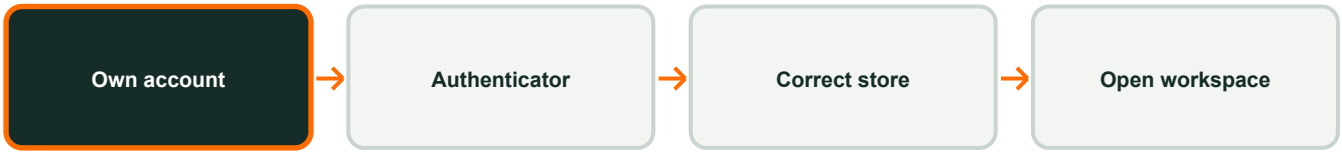

3. Plain-English glossary

Term	Meaning
Store / facility	The site your account is authorised to work in.
Enquiry / lead	A recorded customer need before a rental is completed.
Reservation / hold	A temporary claim on an available unit; it can expire.
Agreement	The rental document the intended customer must review and sign.
Tenancy / occupancy	The saved rental and its relationship to the occupied unit.
Account / ledger	The customer financial record and its dated charges and payments.
Receipt	The saved record of actual received money; it needs source evidence.
Promise to pay	A customer-agreed payment amount/date; it can hold collection action.
Follow-up appointment	A saved agreed call/action with a date, time and responsible staff member.
MFA / authenticator	A second sign-in check from your own authentication app.
OTP / one-time code	A short-lived verification code for its stated action only.
SAST	South African Standard Time, UTC+2. Use it for operational dates.
UAT / acceptance	A person checks the real workflow and confirms the result.
Provider	An outside service, such as payment, message delivery or physical access.
Audit / history	Retained evidence of who did what and when.

4. Getting started and signing in

You need an active staff account, the correct store assignment, a connected device and your own authenticator app. MFA means the second sign-in check from that app.

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

1. Open https://portal.stor24.co.za.
2. Sign in using your own work account.
3. Complete the authenticator check requested by the screen.
4. If prompted to enrol, choose Set up authenticator.
5. Scan the setup QR code using your own authenticator app.
6. Enter its verification code into the enrolment screen.
7. Save your recovery codes in your approved secure location.
8. Confirm the screen says Two-step verification is on.
9. Continue to STOR24.
10. Choose the assigned store before opening customer work.

STOP	Authenticator setup QR codes, sign-in codes and recovery codes are private. Never send them in a support message or screenshot. A deal-specific manager authorisation code is a different process.

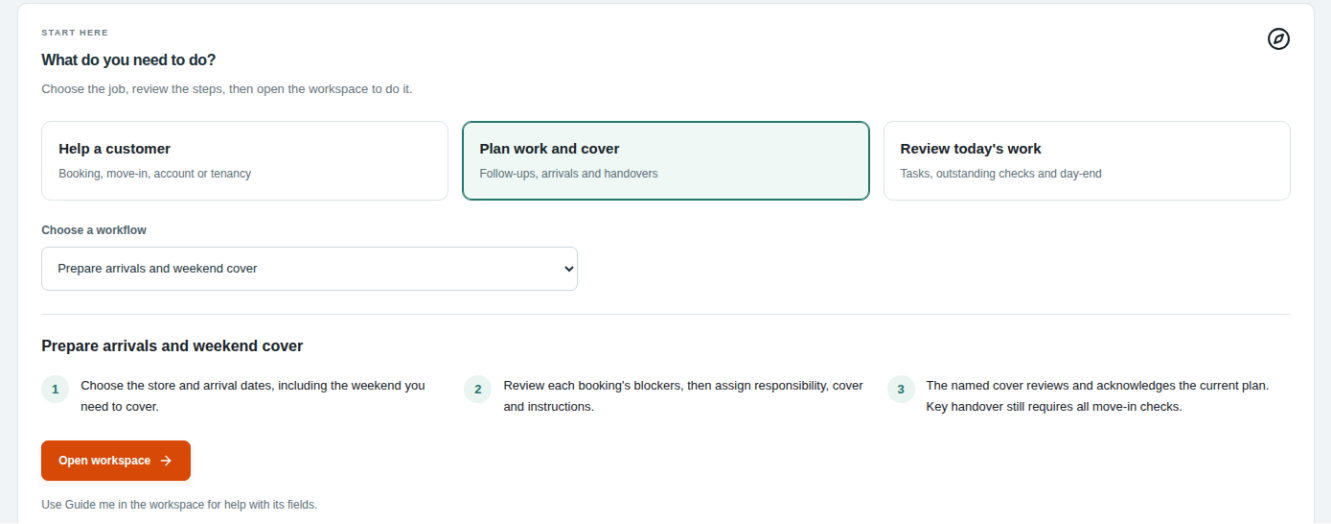

If you cannot sign in

Use the normal password recovery route for a forgotten password. Use your own recovery code if the sign-in screen offers it and your authenticator is unavailable. Ask the owner to use the approved recovery process if you cannot continue. Do not create another account.

5. Start the day and find your workspace

1. Open Operations or the permitted dashboard.
2. Check the selected Store.
3. Review your assigned tasks and current appointments.
4. Open the source queue for the work you will do.
5. Check the source queue filters and update time.
6. Resolve urgent blockers through the right colleague.

Use Menu or Find a workspace. On Operations, Start here lets you choose a work category and workflow. Open workspace takes you to the real screen; reading the guide does not complete the task.

Actual-component example, 16-17 October 2026. Fictitious data; not a current production workload.

> CHECK Queue counts can overlap. Do not add them together as a total. Unavailable is not zero. Refresh the actual queue before acting.

6. The customer journey at a glance

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Enquiry records the need. Reservation holds the unit. Agreement records the customer's acceptance. Payment needs eligible confirmed funds. Handover needs the current date, identity, physical readiness and actual key release.

STOP	A booking is not occupancy. A signature or debit mandate is not payment. A paid account is not proof the gate has been configured or tested.

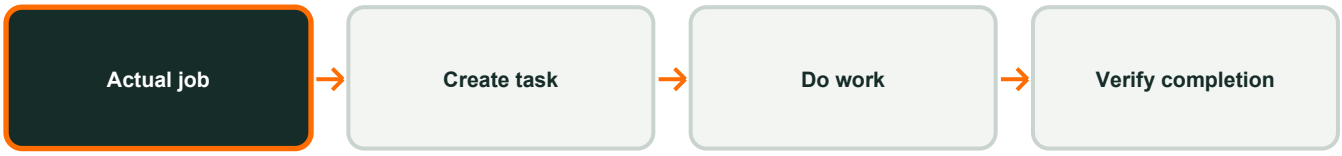

Your main contribution is the physical unit and site handover. Pass customer, commercial and financial changes to the authorised operator.

Workflow 01: Create and finish a site task

Goal: Give one real site action a clear owner and completion check.

Start: Operations > New task

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

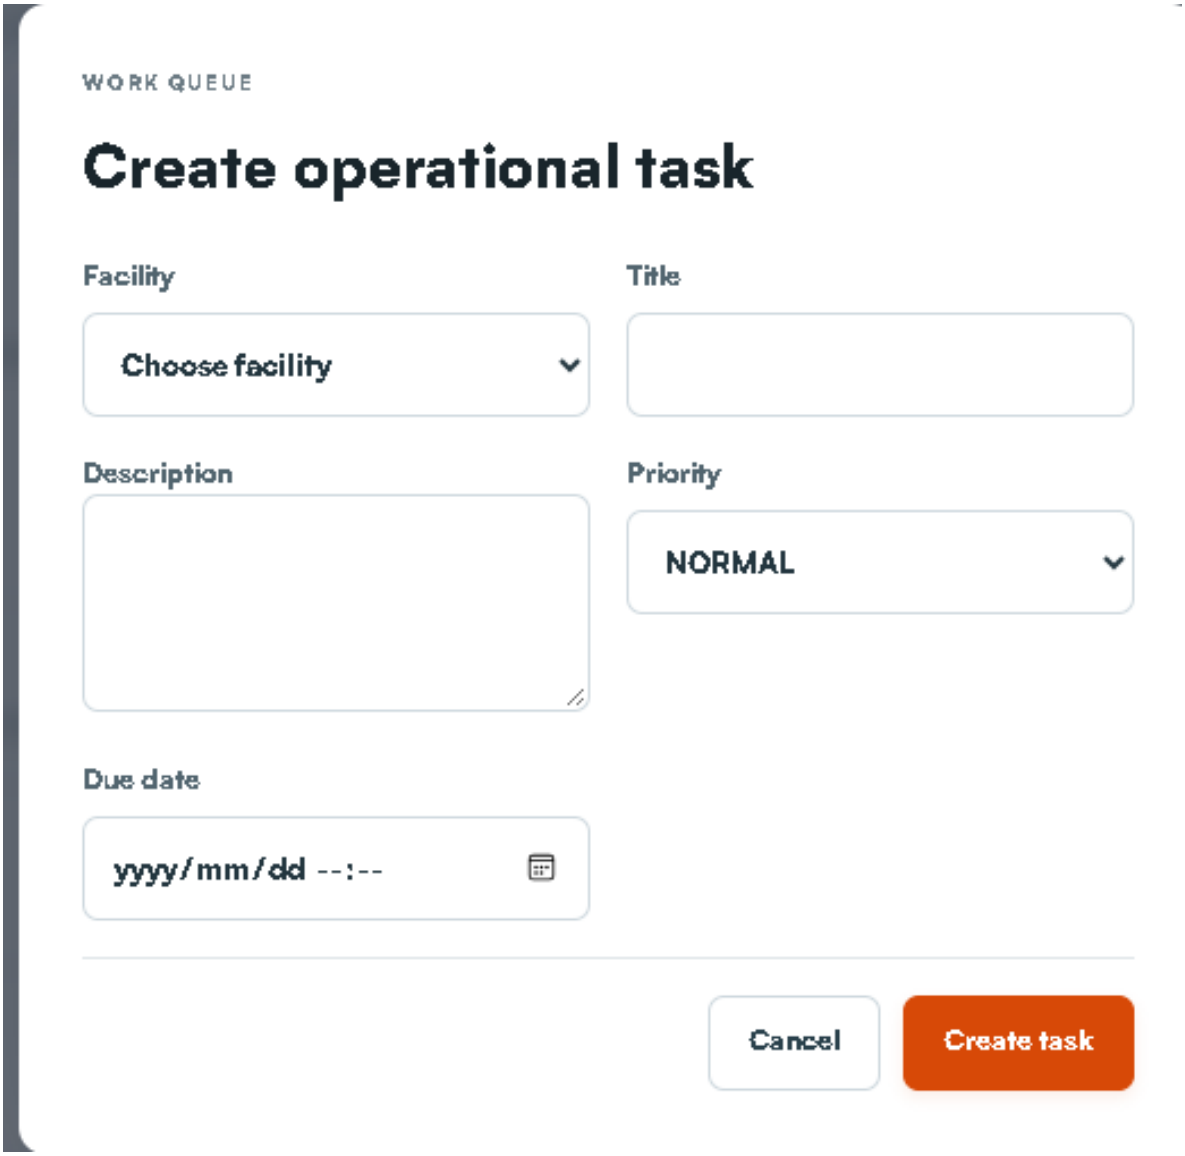

1. Choose Facility.
2. Enter an action-based Title.
3. Describe the actual location and required work.
4. Choose Priority.
5. Enter the agreed Due date if needed.
6. Select Create task once.
7. Find the saved task in Assigned operational tasks.
8. Complete the actual work.
9. Select Complete and verify the task after reload.

CHECK	The saved task identifies the correct store and due date. Completion reflects actual work.
STOP	A system task does not call a contractor or emergency service. Use the approved site response procedure for immediate danger. Do not put private customer documents into a general task.

Fields and choices explained

Field / choice	How to use it
Facility	Choose the store where the work must happen.
Title	Use an action and location, for example Inspect corridor lighting.
Description	State what happened, the exact location, required action and who should receive the outcome. Keep customer identity/bank data out.
Priority	Choose LOW, NORMAL, HIGH or URGENT according to the actual operational urgency.
Due date	Enter the agreed date/time if needed. Check the local date and time before saving.

Screen guide: Create and finish a site task

Retained live empty-form or cropped interface capture, 15 October 2026. No record was submitted for the screenshot. Use the numbered workflow for actions and approval checks.

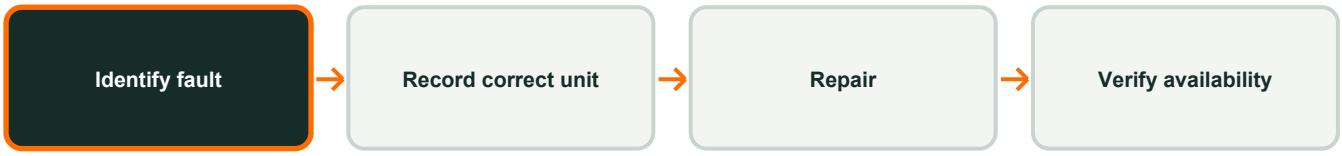

TIP Read the field labels on your own screen. If a control is missing, check your role and store with the owner. Do not switch to another person's account.

Workflow 02: Report and resolve a maintenance fault

Goal: Record the fault and its effect on unit availability.

Start: Operations > Maintenance queue > New request

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Choose Facility.
2. Choose the affected Unit or Facility-level request.
3. Enter the fault Title.
4. Describe the observed condition.
5. Set Priority and the response target.
6. Select Create request.
7. Select Start when work actually starts.
8. Select Complete after the real repair.
9. Reload to check the request and unit availability.

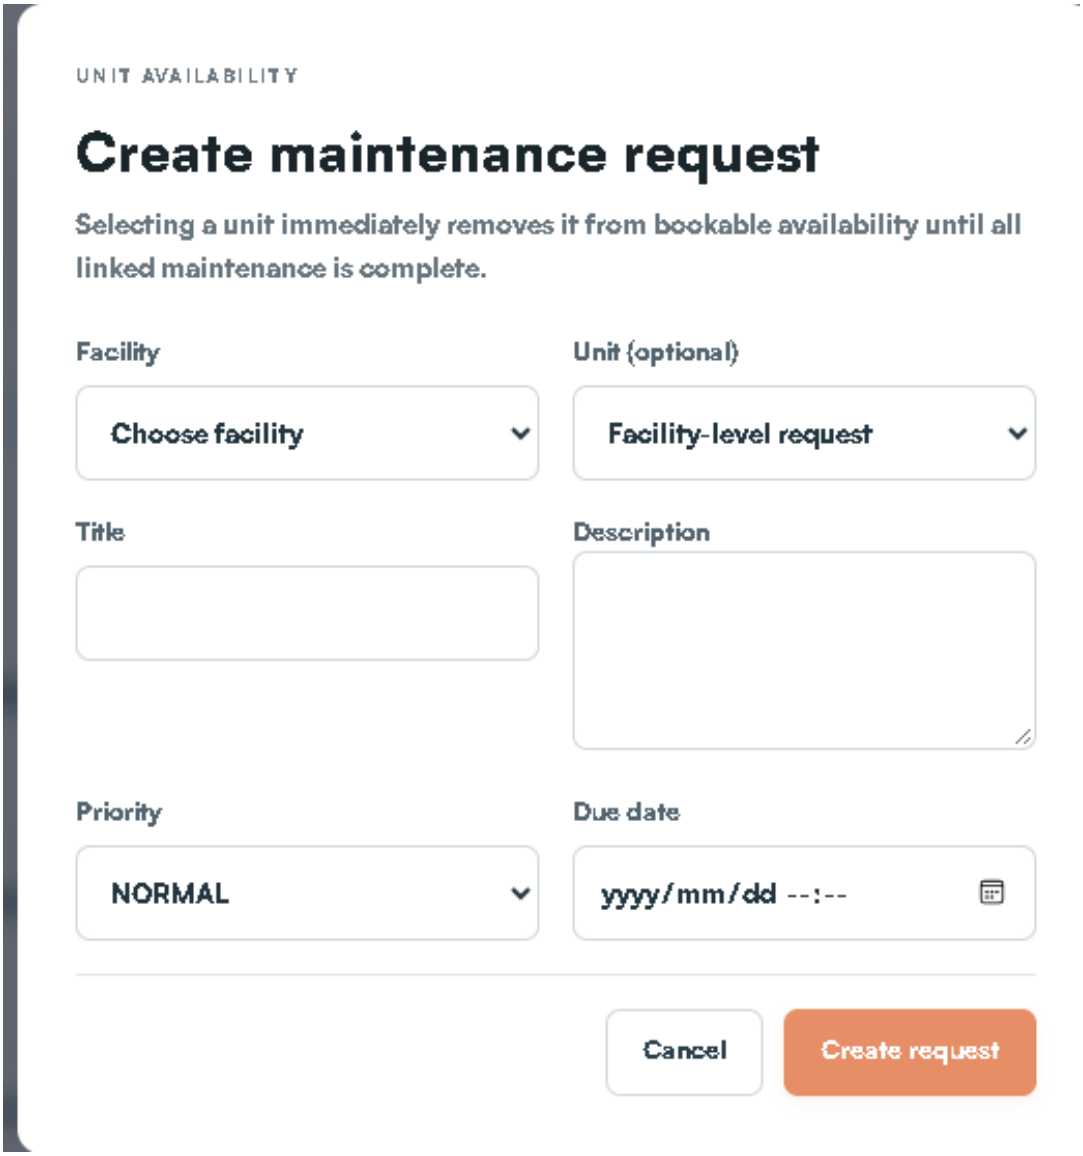

CHECK	The request reflects the actual repair state. Other open requests may still keep the unit unavailable.

STOP	Selecting a unit can remove it from bookable availability while maintenance is open. Do not choose a random unit for a shared-area fault. Escalate unsafe conditions through the site procedure immediately.

Fields and choices explained

Field / choice	How to use it
Facility	Select the correct store first.
Unit (optional)	Choose the affected unit, or Facility-level request for a shared-area fault. Selecting the unit changes bookable availability.
Title	Name the specific fault and location.
Description	Record the observed condition, impact and required remedy. Use factual wording.
Priority and Due date	Set the actual urgency and agreed response target.

Screen guide: Report and resolve a maintenance fault

Retained live empty-form or cropped interface capture, 15 October 2026. No record was submitted for the screenshot. Use the numbered workflow for actions and approval checks.

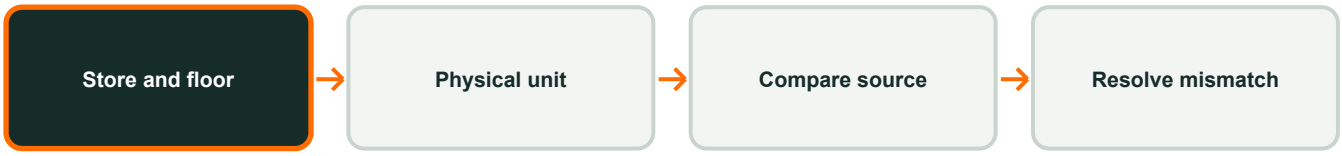

TIP Read the field labels on your own screen. If a control is missing, check your role and store with the owner. Do not switch to another person's account.

Workflow 03: Check a unit and the facility map

Goal: Compare the recorded unit with the physical site.

Start: Facility map / permitted Units & rates workspace

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Choose the assigned Store.
2. Choose the relevant floor.
3. Locate the exact unit number.
4. Compare its recorded size and status with the physical unit.
5. Record any mismatch as a factual site task.
6. Ask the authorised inventory or owner colleague to correct the source.
7. Recheck the corrected record.

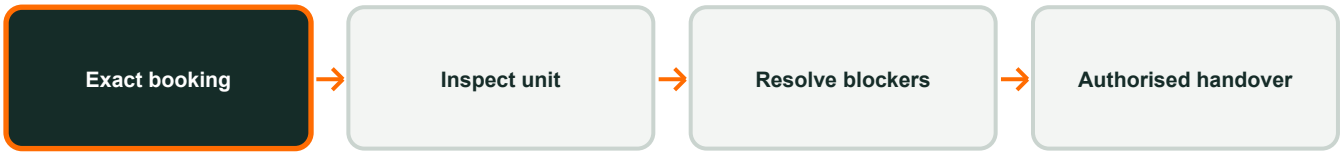

CHECK	The source record and actual site are reconciled, or the discrepancy has a named owner.
STOP	Viewing a map is not permission to delete units, change rates or modify walls. Printed architectural labels are not authority for signage or booking numbers.

Workflow 04: Prepare the physical unit for arrival

Goal: Make the exact booked space ready without bypassing customer checks.

Start: Operations > Expected arrivals + physical site

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

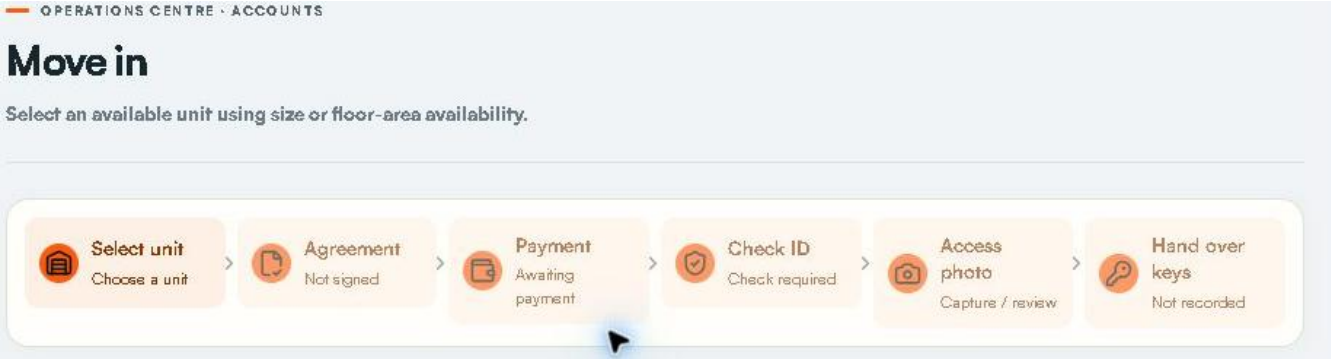

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Find the exact expected booking.
2. Confirm its unit and arrival date with the customer operator.
3. Inspect the physical unit.
4. Record any unresolved maintenance.
5. Agree who will meet the customer.
6. Read the current booking readiness blockers.
7. Pass commercial or payment blockers to the authorised colleague.
8. Release keys only under the authorised handover procedure.

CHECK	The site is ready or its blocker is recorded. The actual handover is recorded by an authorised operator.
STOP	Facilities duties do not grant receipt posting, price approval or identity-review access. A site-ready unit alone does not permit move-in.

Screen guide: Prepare the physical unit for arrival

Retained live empty-form or cropped interface capture, 15 October 2026. No record was submitted for the screenshot. Use the numbered workflow for actions and approval checks.

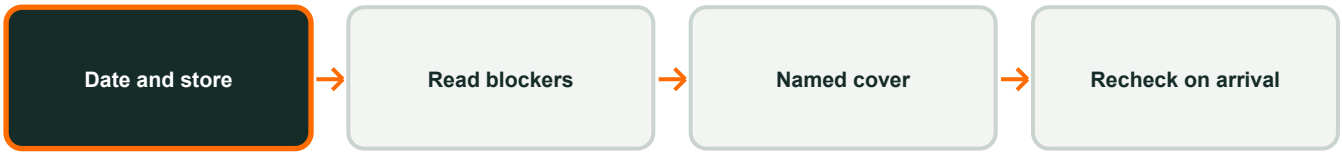

TIP Read the field labels on your own screen. If a control is missing, check your role and store with the owner. Do not switch to another person's account.

Workflow 05: Prepare arrivals and weekend handover

Goal: Make the site and covering colleague ready for the actual booking.

Start: Operations > Expected arrivals

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

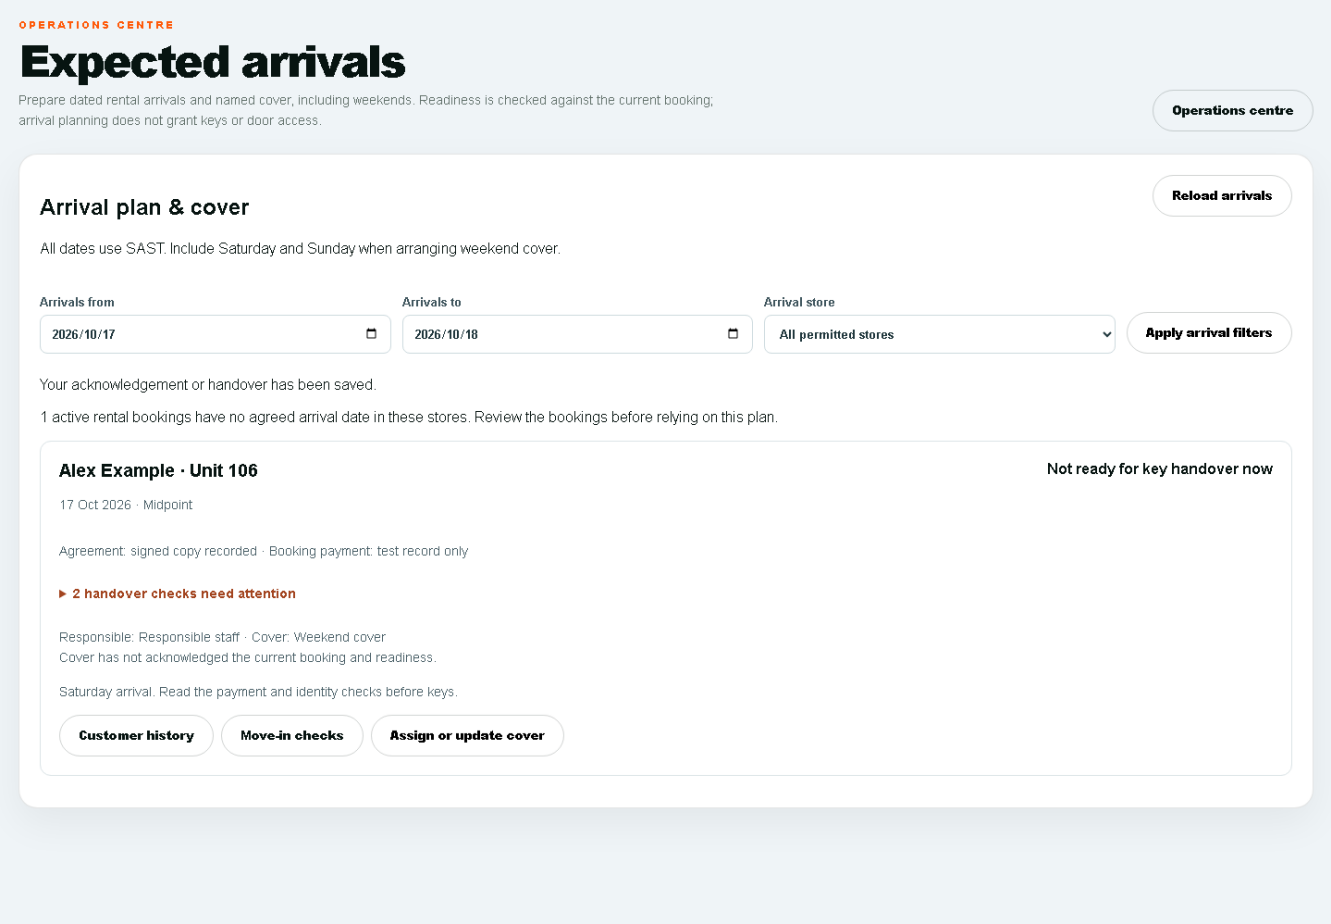

1. Choose the assigned Store.
2. Set the arrival date range.
3. Open the exact booking card.
4. Read its current readiness blockers.
5. Assign the responsible colleague and cover as permitted.
6. Record the factual site instructions.
7. Have the named cover acknowledge their own handover.
8. Recheck readiness when the customer arrives.

CHECK	The booking has a named owner, current instructions and a genuine cover acknowledgement.
STOP	Acknowledging cover does not clear payment, signature, identity or door-access blockers. Do not tick a physical handover before keys are released.

Fields and choices explained

Field / choice	How to use it
Date range	Use the intended arrival dates, not the hold-expiry date.
Undated count	Investigate bookings with no arrival date.
Readiness	Use the current source record; do not rely on an old screenshot.

Screen guide: Prepare arrivals and weekend handover

Actual-component example with fictitious data, captured 15-17 October 2026. Use the numbered workflow for actions and approval checks.

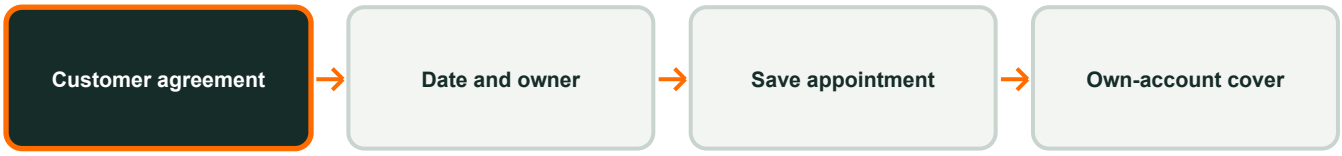

> **TIP** Read the field labels on your own screen. If a control is missing, check your role and store with the owner. Do not switch to another person's account.

Workflow 06: Schedule an agreed follow-up and cover

Goal: Retain a customer-agreed appointment with a responsible person.

Start: Operations > Open customer follow-ups, or Customers & tenants > customer > Follow-ups

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Obtain the customer's agreement to the appointment, its time and action. An internal desire to chase debt is not an agreed appointment.

Do the work

1. Open the exact customer from the Operations overview.
2. Open Follow-ups if it is not already selected.
3. Confirm the fixed customer and choose Store.
4. Select Responsible staff.
5. Select Covering staff if cover is needed.
6. Enter Agreed date and time (SAST).
7. Choose Appointment title, or describe Other.
8. Enter Agreed action and handover details.
9. Select Save agreed appointment.
10. Reload the queue to verify the appointment.

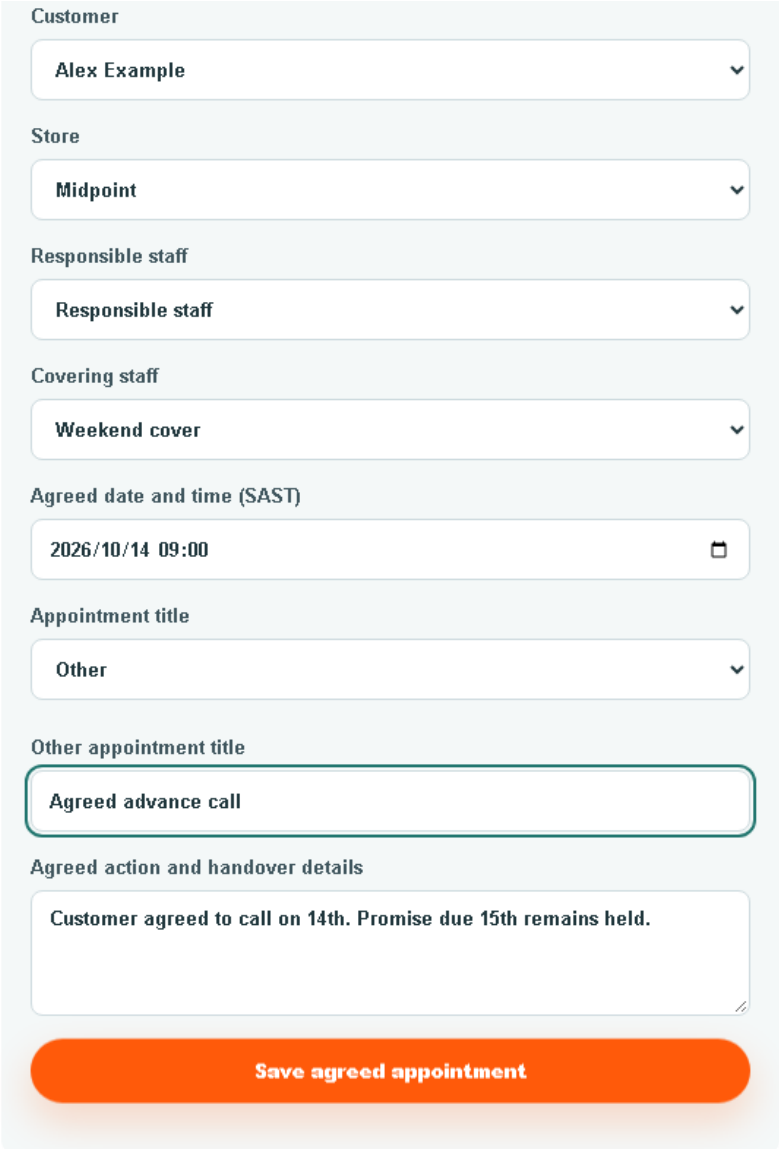

CHECK	The appointment retains its customer, title, date/time and staff. The covering person must use their own login to Acknowledge cover.

STOP	A note is not an appointment. An appointment is not an automatic customer reminder or permission to ignore a collections promise. Operations is the overview; use Open customer follow-ups to work inside the selected customer. If customer-profile access is restricted, use your permitted shared queue or ask the customer coordinator.

Fields and choices explained

Field / choice	How to use it
Customer	The customer profile fixes the selected customer. In the standalone Operations form, search and select the exact customer first.
Store	Choose the customer's operational store.
Responsible staff and Covering staff	Choose the actual accountable person and optional cover with store access. Assigning cover is not their acknowledgement.
Agreed date and time (SAST)	Enter the customer-agreed local time. This is separate from a promise-to-pay date.
Appointment title	Use a clear task such as Agreed advance call, not an unexplained reminder.
Agreed action and handover details	Record what the customer agreed, what cover must do and any existing promise/hold that must remain in place.

Screen guide: Schedule an agreed follow-up and cover

Actual-component example with fictitious data, captured 15-17 October 2026. Use the numbered workflow for actions and approval checks.

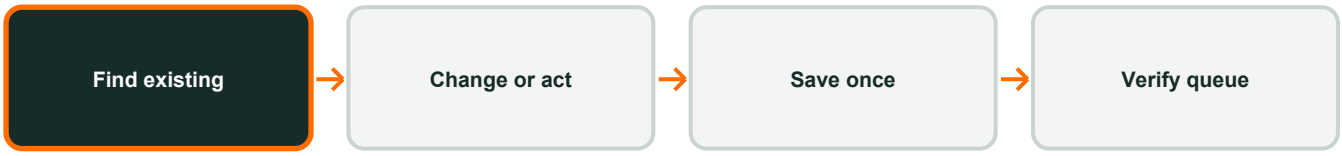

TIP Read the field labels on your own screen. If a control is missing, check your role and store with the owner. Do not switch to another person's account.

Workflow 07: Reschedule, acknowledge or finish a follow-up

Goal: Keep the appointment queue accurate when plans change.

Start: Selected customer > Follow-ups, or permitted Operations > Follow-ups & handovers

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Find the existing appointment using the queue filters.
2. Open its current details.
3. Edit the agreed date, owner or handover details when plans change.
4. Save the change once.
5. Ask the actual covering person to Acknowledge cover from their account.
6. Complete or cancel the existing appointment when justified.
7. Reload the queue to verify the saved state.

CHECK	A finished appointment leaves the open queue. Changed handover details may need a fresh cover acknowledgement.
STOP	Do not create a second appointment to hide an uncertain save. Check completed or cancelled filters when a record appears to have disappeared.

Fields and choices explained

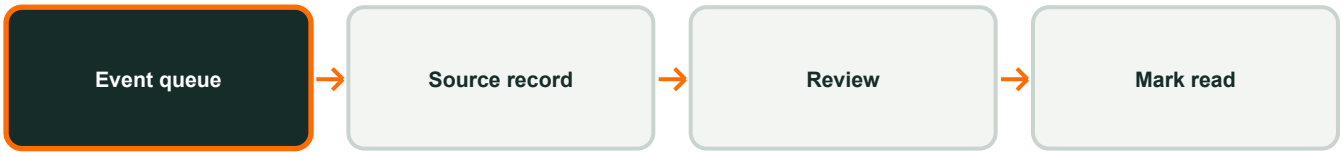

Field / choice	How to use it
Assigned to me	Shows your assigned work.
Due / upcoming	Check both queues and their dates.
Completed / cancelled	Use these states to find closed work.

Workflow 08: Review booking and move-in events

Goal: Understand which stage actually occurred.

Start: Operations > booking and move-in events

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Select the assigned Store.
2. Apply the required event filters.
3. Read the event type and time.
4. Open the related booking or customer.
5. Check the underlying record.
6. Mark read after reviewing the event.
7. Reload to confirm your read state.

CHECK	Your read status is retained after reload and the underlying booking remains unchanged.
STOP	An event is evidence of its stated stage only. It is not proof of payment, active door access, another employee's acknowledgement or a delivered manager alert.

Fields and choices explained

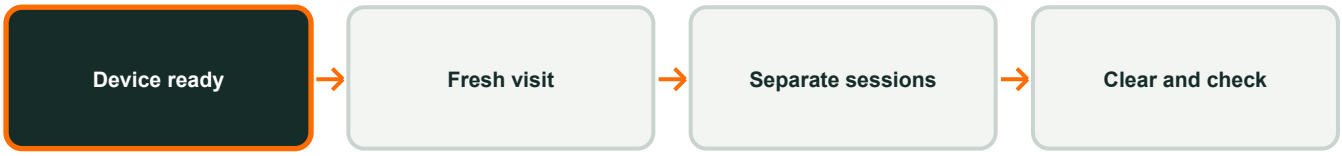

Field / choice	How to use it
Event stage	Distinguish booking created, recorded signed agreement, move-in started and actual key-handover audit event.
Customer history	Open the exact customer history to understand the next action.
Mark read	Mark read only after reviewing the event. This acknowledges your inbox; it does not send a staff/customer message.

Workflow 09: Prepare and clear shared devices

Goal: Protect customer privacy between visits.

Start: Counter device and authorised staff device

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Check which device is assigned for customer use.
2. Check its network connection.
3. Open the approved customer journey.
4. Confirm no previous customer details remain.
5. Keep the staff session on the staff device.
6. End or clear the visit after the customer finishes.
7. Check the next visitor sees a fresh entry screen.

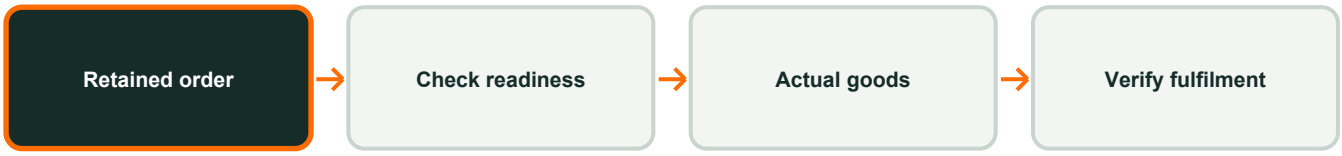

CHECK	No previous customer visit or staff session remains exposed on the customer device.
STOP	Actual tablet procurement/setup and camera/offline/reconnect acceptance remain open. Private Counter transactions need connectivity. Do not claim offline payment, signing or access enrolment.

Workflow 10: Handle stock and customer collections

Goal: Supply only the correct goods against the retained order.

Start: Operations > permitted stock / fulfilment workspace

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Confirm the correct store, source record and permission for this action. Have the agreed instruction and any required approval ready.

Do the work

1. Find the actual order or stock request.
2. Check its Store and customer reference.
3. Check the authorised paid/collection status.
4. Pick the exact item and quantity.
5. Record the physical issue through the supported fulfilment action.
6. Check the retained order and stock result.
7. Hand a discrepancy or return to the authorised stock colleague.

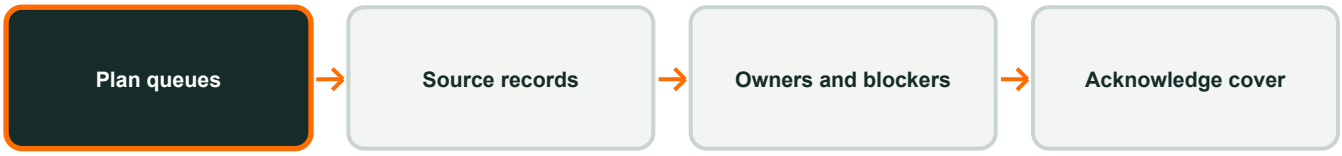

CHECK	Recorded fulfilment matches the goods actually supplied.
STOP	Do not mark a collection complete before handover or use stock adjustments to hide a missing item. Payment and refund decisions belong to authorised finance staff.

Workflow 11: Plan the day and hand over a shift

Goal: Leave the next person a current, usable work plan.

Start: Calendar + Operations source queues

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Choose the actual date range and store for the work you are planning.

Do the work

1. Choose the Store and date range.
2. Review assigned tasks and arrivals.
3. Open the source record for each action that needs a change.
4. Update the permitted owner or next action.
5. Record unresolved blockers in the appropriate handover.
6. Ask actual cover to acknowledge their assigned work.
7. Confirm the incoming colleague can find the source records.

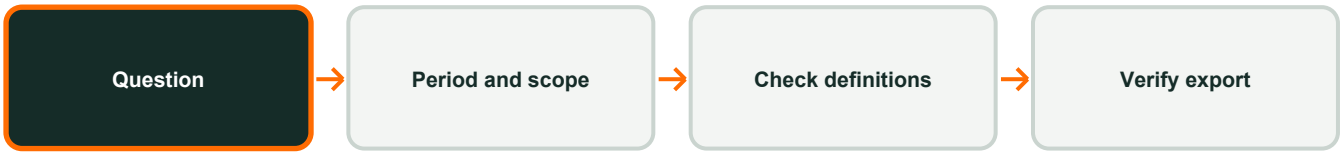

CHECK	Every open item has a source reference, next action and responsible person.
STOP	A calendar entry is an overview, not proof of completion or customer attendance. Do not paste sensitive identity or bank data into a shift handover.

Workflow 12: Choose and verify a report

Goal: Answer a defined question using the right data and period.

Start: Reports

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

Before you start

Know the business question, reporting period, store and required data basis.

Do the work

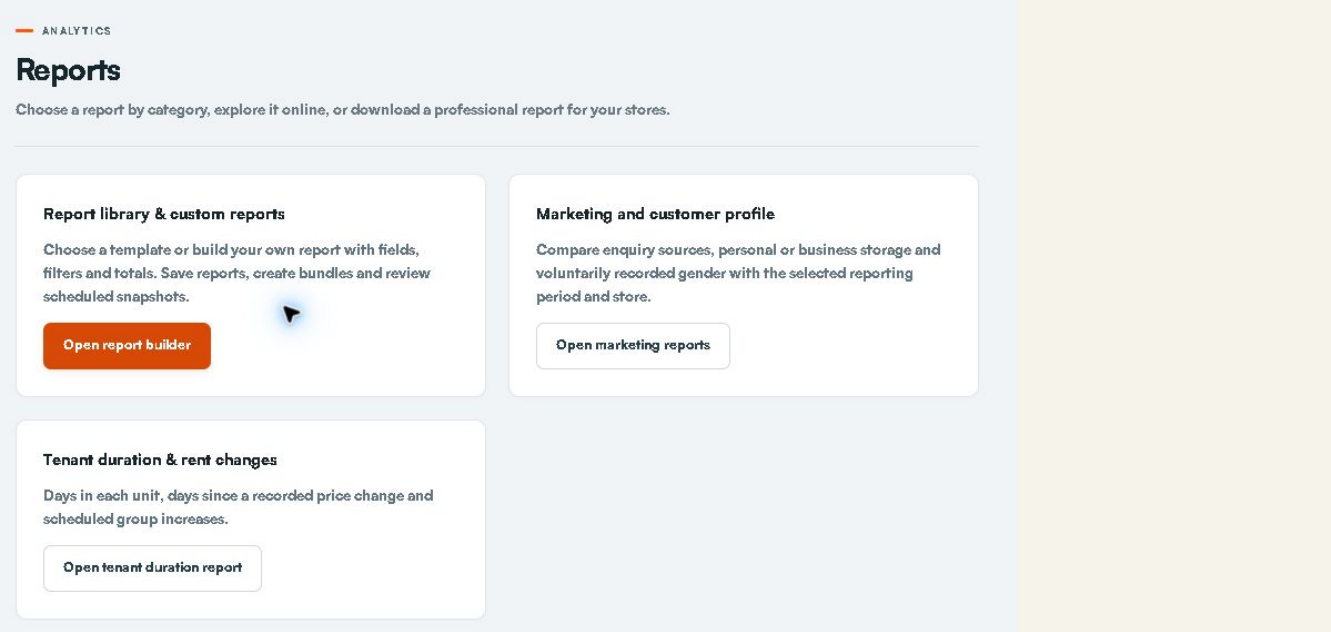

1. Choose the report matching the business question.
2. Select Store.
3. Set the required date range.
4. Read the report data definition.
5. Apply the filters.
6. Review missing-source warnings and totals.
7. Export only the permitted result.
8. Open the file to check its period and scope.

CHECK	The on-screen/downloaded result matches the question, date basis, store, row grain and data completeness. A report is not independently reconciled finance evidence merely because it downloaded.
STOP	If the report is blocked, use the safe reason/request reference. Do not remove filters or export through another screen to bypass the restriction.

Fields and choices explained

Field / choice	How to use it
Find a report and Category	Choose a relevant template. Use View online or Use template as offered.
Dates and store	Apply the report's stated date basis. Current balances, activity during a period and whole-period occupancy answer different questions.
Data definition	Read record grain and requirements. Imported history or missing definitions must not be treated as zeros.
Export	Export only the permitted result. Check totals and record count before sharing; sensitive personal fields have additional authority checks.

Screen guide: Choose and verify a report

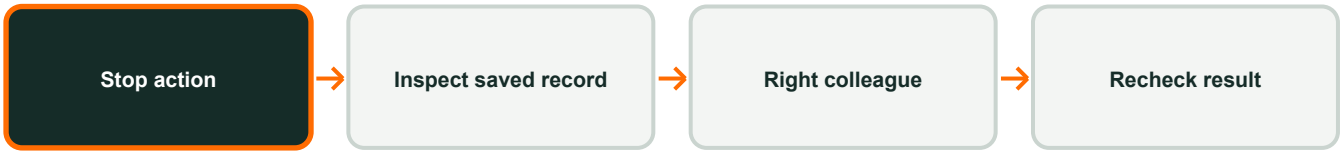

Retained live empty-form or cropped interface capture, 15 October 2026. No record was submitted for the screenshot. Use the numbered workflow for actions and approval checks.

> **TIP** Read the field labels on your own screen. If a control is missing, check your role and store with the owner. Do not switch to another person's account.

When something goes wrong

First stop the uncertain action. Keep the source reference and read the exact error. Check the saved record before trying again.

YOU ARE HERE: START THIS WORKFLOW

Follow the numbered steps below. Stop at any warning or missing approval.

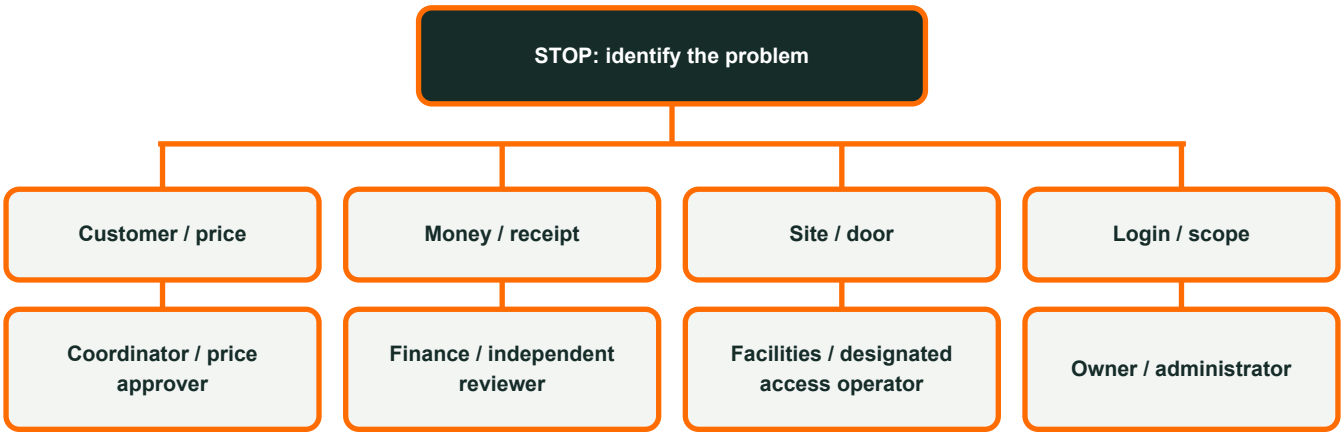

Problem	Check and next action
Access restricted	Check your store and sign-in. Ask the owner for the required duty; do not borrow a login.
Save response uncertain	Reload the source record. Search for the original before repeating a create, payment or send.
Record seems missing	Check store, date, status and assigned-person filters, including completed/cancelled.
Wrong customer or store	Stop. Preserve the reference and ask the owner to resolve the mismatch. Do not export or edit further.
Quote still PROPOSED	Check the exact booking after reload. Ask the authorised approver; do not tell the customer the price is approved.
Payment pending / unknown	Ask finance for the authoritative source. Do not mark paid or release keys from a screenshot.
Unsafe site / access failure	Follow the approved site response procedure immediately and notify the site/access lead. A task does not summon help.
Message not received	Review the retained attempt. Provider acceptance is not delivery; avoid blind repeat sends.
Device offline	Pause private transactions and follow the recovery steps below.
No escalation contact	Ask the owner to identify the named colleague before taking a restricted action.

What to include in an escalation

Your name; Store; customer/booking/task reference; screen; SAST time; exact safe error; intended result; observed saved status; and whether you retried. Exclude passwords, codes, identity images and bank details.

Escalation map

Start at the top. Follow the branch matching the problem. These role names identify responsibility; they do not assume a named account has been appointed.

Issue type	Route and return check
Customer / booking	CS operator -> Faeez / authorised customer coordinator -> owner if unresolved. Reopen the exact customer or booking.
Price decision	CS operator -> explicitly authorised booking-price approver -> customer acceptance process. Check retained proposal status.
Money / receipt / refund	Operator -> finance -> required independent approver/provider specialist. Check the real account, source and retained outcome.
Site / maintenance	Operator -> facilities manager -> approved contractor/site response. Inspect the actual physical result.
Door / enrolment	Site colleague -> designated access operator -> approved provider support. Verify the actual authorised access result.
Login / scope / data exposure	Operator -> organisation owner / designated administrator. Resume only after account/scope and safe access are confirmed.

STOP	For immediate danger, use the organisation's approved emergency/site procedure. This manual does not invent emergency numbers, safety instructions or a contractor call-out policy.

Outage, recovery and end of shift

When the connection drops

1. Stop private customer transactions that need the server.
2. Keep a safe reference to the last action attempted.
3. Reconnect using the approved network.
4. Sign in again if the session expired.
5. Reload the source record.
6. Check whether the original action was saved.
7. Resume only after resolving any conflict or uncertain result.

Use offline capture only where your actual approved device and screen support it. Snapshot expiry, queued changes and synchronisation conflicts must be reviewed. Do not perform offline payment, signing, identity submission or Counter transactions from this guide.

Before leaving

1. Check each open item has a next action and owner.
2. Record unresolved source or approval blockers.
3. Ask the covering colleague to acknowledge their work.
4. Close private downloaded files.
5. Sign out of STOR24.
6. Check shared devices contain no previous customer visit.

WAIT	The Android installation/sign-in evidence does not prove every laptop, camera, tablet or offline/reconnect workflow. Physical-device acceptance is still required.

Safe practice and trainer check

Read the workflow first. A trainer must approve any test identity, store and action. Do not use an ordinary customer to experiment.

Practice check	Evidence to record
Find the correct store	Trainee opens their own permitted store.
Find a source record	Trainee identifies the correct customer, booking or task.
Explain the next action	Trainee identifies any required approval and blocker.
Check a saved result	Trainee can distinguish a banner from a retained result.
Handle an uncertain response	Trainee checks the original rather than duplicating it.
Escalate safely	Trainee identifies the responsible role and safe reference.
Sign out / clear device	Trainee protects downloaded records and shared devices.

Trainer record: trainee name; actual role; Store; SAST date/time; workflow; expected result; observed result; evidence reference; remaining action; trainer. This page is a checklist, not a pre-filled sign-off.

Edition notes and current limits

Edition 4, prepared 21 October 2026. Based on the fetched STOR24 portal main source f4cd3f16, the canonical release context, role definitions, original Faeez register and previously verified illustrated manuals. Source and screenshot provenance are retained with this pack.

Faeez's latest documented access is 30 Midpoint-scoped permissions on 20 October, superseding the earlier 27/29 counts. A fresh permission audit was not performed for this edition. Standard role definitions describe the shipped role; an individual may have custom grants.

Mandatory authenticator setup/sign-in was deployed and owner-tested in the 20 October release record. Staff must enrol and validate their own device. The newer CS-operator booking-price access repair is merged in the reviewed source; fresh production operator verification was not performed for this manual.

The customer-profile Follow-ups tab is normally deployed and has documented real CS-operator navigation/readback evidence from 20 October. Use Operations as the overall work overview, then Open customer follow-ups for the selected customer. Shared Operations appointment work remains available within your permissions. Actual live edits/completion and wider cover acceptance remain separate. Manager WhatsApp authorisation is conditional on owner registration, approved template/configuration and actual delivery.

WAIT	Open boundaries include actual tablet setup, complete walk-in/customer and physical-access journeys, legal/provider/fee approvals, authoritative debit-failure ingestion, original-source reconciliation, recipient delivery, incoming-manager onboarding and outstanding staff/device training. Released software does not close these checks.

The three role manuals are training documents. They do not change software, permissions, policy, provider flags, financial records or physical access. The separate in-app handbook is unchanged.

Quick-reference card

Facilities Manager Operator Manual | Keep this page beside your screen.

Common task	Route / result to check
Start shift	Operations -> Store -> tasks, maintenance and arrivals.
Site task	New task -> title/location/due date -> actual work -> Complete.
Fault	New request -> correct unit/shared area -> repair -> verify availability.
Arrival	Expected arrivals -> exact booking -> physical readiness -> current blockers.
Cover	Read source details -> own-account acknowledgement -> recheck on arrival.
Goods	Exact order -> authorised readiness -> actual issue -> verify stock.
Account / price issue	Pass reference to Faeez or finance; keep keys held if blocked.
Shared device	Fresh customer visit -> separate staff login -> clear after use.

Before every save

Correct customer + correct Store + correct reference + correct amount/date + required authority.

STOP	Uncertain result? Reload and inspect the original. Never repeat a payment, create another booking or resend blindly.

Escalate: customer/booking -> coordinator; money -> finance; site -> facilities; doors -> designated access operator; login/permissions -> owner.

End shift: name the next owner, retain the source reference, clear shared devices, close private files and sign out.
