Using this manual

This is the operating manual for the facilities manager and authorised site cover using the STOR24 staff portal. It explains where to go, what to enter, when to confirm, how to check the saved result and how to handle an exception. Keep it available beside the system during training and daily work.

Start with the daily routine. Then choose the task from the clickable contents. The field tables are practical entry instructions; the steps explain the process. For money, agreements, identity and keys, follow the separate checks rather than assuming an earlier stage completes the next one.

The staff portal is https://portal.stor24.co.za. The public customer website is https://stor24.co.za. All staff appointments and operational dates in this manual use South African Standard Time, UTC plus two hours.

Retained screenshots labelled 15 October show the live interface at that date; empty live forms were opened without submitting records. New release examples are dated and labelled separately. Owner-view screenshots may show more stores or controls than your own account. Customer examples are clearly labelled and use fictitious data. Use only the actions granted to your account and assigned store.

Sign in find a workspace and get help

• Open the staff portal and sign in with your own work account. Complete the verification requested by the sign-in screen. Do not use another employee's password.

• If the password fails, use the normal password recovery route. If the account or store is wrong, tell the owner which screen and work you need. Do not create another account to bypass the issue.

• Choose Menu and the named workspace, or use Find a workspace. On a small screen, the menu may be collapsed. Guide me opens the on-screen instructions; reading them does not perform the work.

• Confirm the store before changing a record. A locked workspace or Access restricted means that action is unavailable to your account. A visible control is not permission to perform an out-of-role task.

• When finished, sign out and close private files. Do not leave a staff session, customer document or downloaded history available on a shared device.

The customer journey

Five distinct stages. Each stage needs its own saved evidence.

Enquiry records the customer need. Reservation protects a unit for a limited time. Agreement records acceptance. Payment records eligible confirmed funds. Handover checks identity, date, access readiness and the real release of keys. A signed mandate is not payment, and a booking is not occupancy.

Your duties and handover boundaries

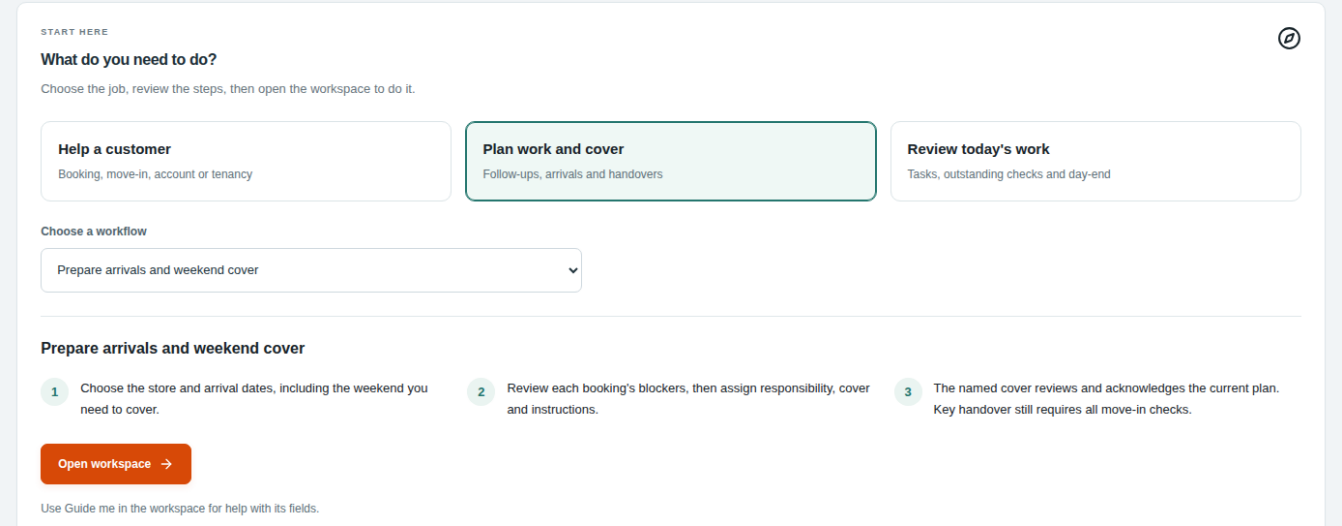

Your work is site readiness, operational tasks, maintenance, physical arrival preparation and clear handover. Use the actions granted to your account. The manual describes the facilities duties; it does not assign a production account or imply that every visible shared-screen control belongs to your role.

Facilities duty	Who handles the related decision
Site task fault and maintenance condition	Manager records factual site work and verifies the physical result.
Customer booking quote agreement account or payment	Faeez or an authorised customer/finance operator.
Door enrolment suspension restoration or configuration	Designated access operator under approved policy.
Staff permissions provider setup commercial settings or general exports	Organisation owner or delegated administrator.

Use the Operations dashboard and Start here guide

Open Operations. Start here is above Quick access. Choose the type of work, then Choose a workflow. Read its three steps and select Open workspace. The guide opens the real workspace; it does not save a booking, complete a task or approve handover.

Work category	Choose it for
Help a customer	Walk-in booking, move-in, account payment, transfer or move-out.
Plan work and cover	Customer follow-ups and arrivals or weekend cover.
Review today's work	Assigned tasks, payments awaiting confirmation, booking events, maintenance, stock or day-end. Only available workflows are offered.

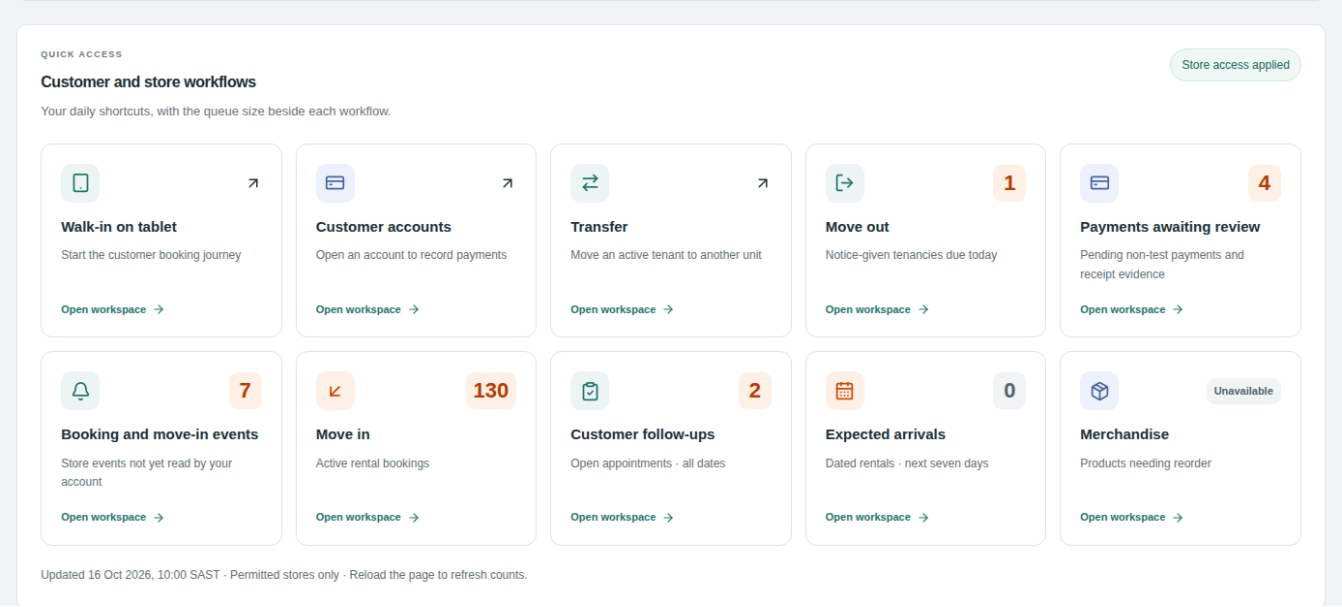

Released Start here interface with sample data from its browser verification, 16-17 October. Choose a workflow reveals its three steps. This is not a live customer record.

Changing category clears the previous workflow choice. Choose the new workflow before opening it. If your job is missing, use the permitted Menu workspace or ask the owner to check access; the guide only offers links available to your account.

Read counts before opening the work

Quick access shows the queue beside each workspace. Today at a glance shows Tasks due, Agreed follow-ups, Calls past due and Reorder. Read the update time and store scope. Counts can overlap and must not be added into an overall workload total. Unavailable means the count could not be checked; it is not zero.

Released dashboard with sample queue counts. These are verification examples, not current workload or production capacity measurements.

Use Refresh dashboard to reload the summary. Open the relevant source queue and check its own filters and snapshot before acting. A completed refresh does not prove bank reconciliation, message delivery or physical readiness.

Daily operating routine

• Review assigned tasks maintenance and the age of the reminder snapshot.

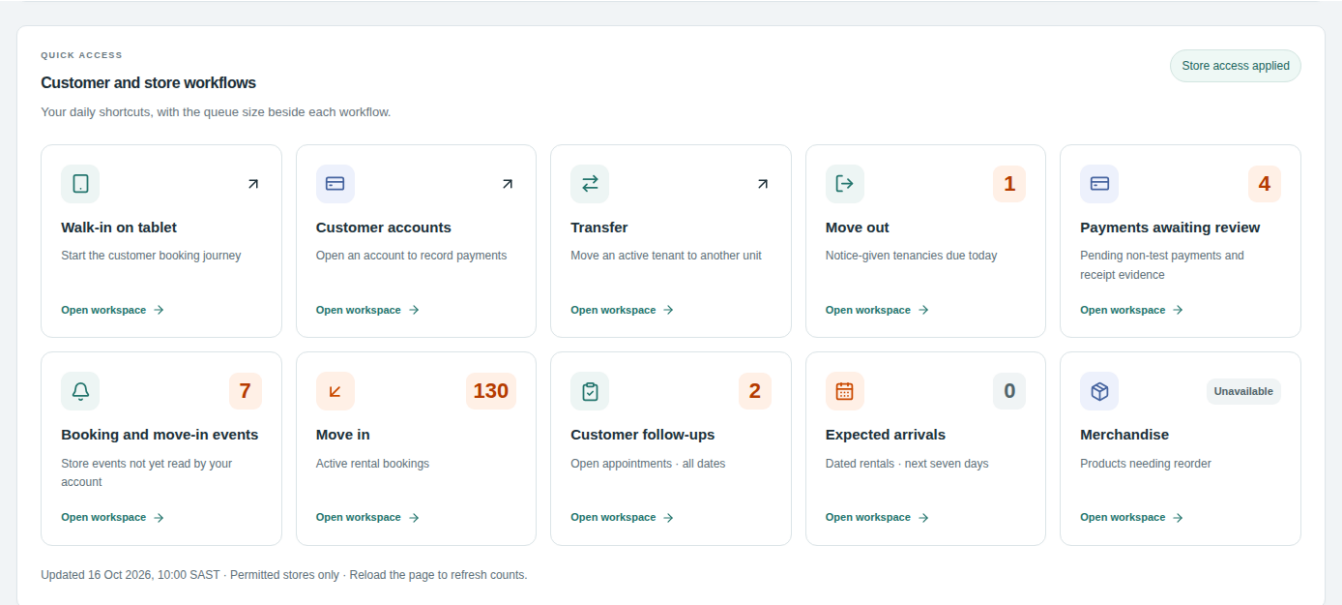

• Walk the site and compare the actual unit numbers and condition with the system.

• Review expected arrivals for today and the next cover period, including weekends.

• Resolve real site tasks and report booking payment identity or access blockers to the responsible operator.

• Before leaving, hand over open work to named cover and check acknowledgement.

Read the timestamp and scope of a reminder count. Open its underlying queue before acting. Reload to refresh; a zero does not establish that source data, bank reconciliation or provider delivery is complete.

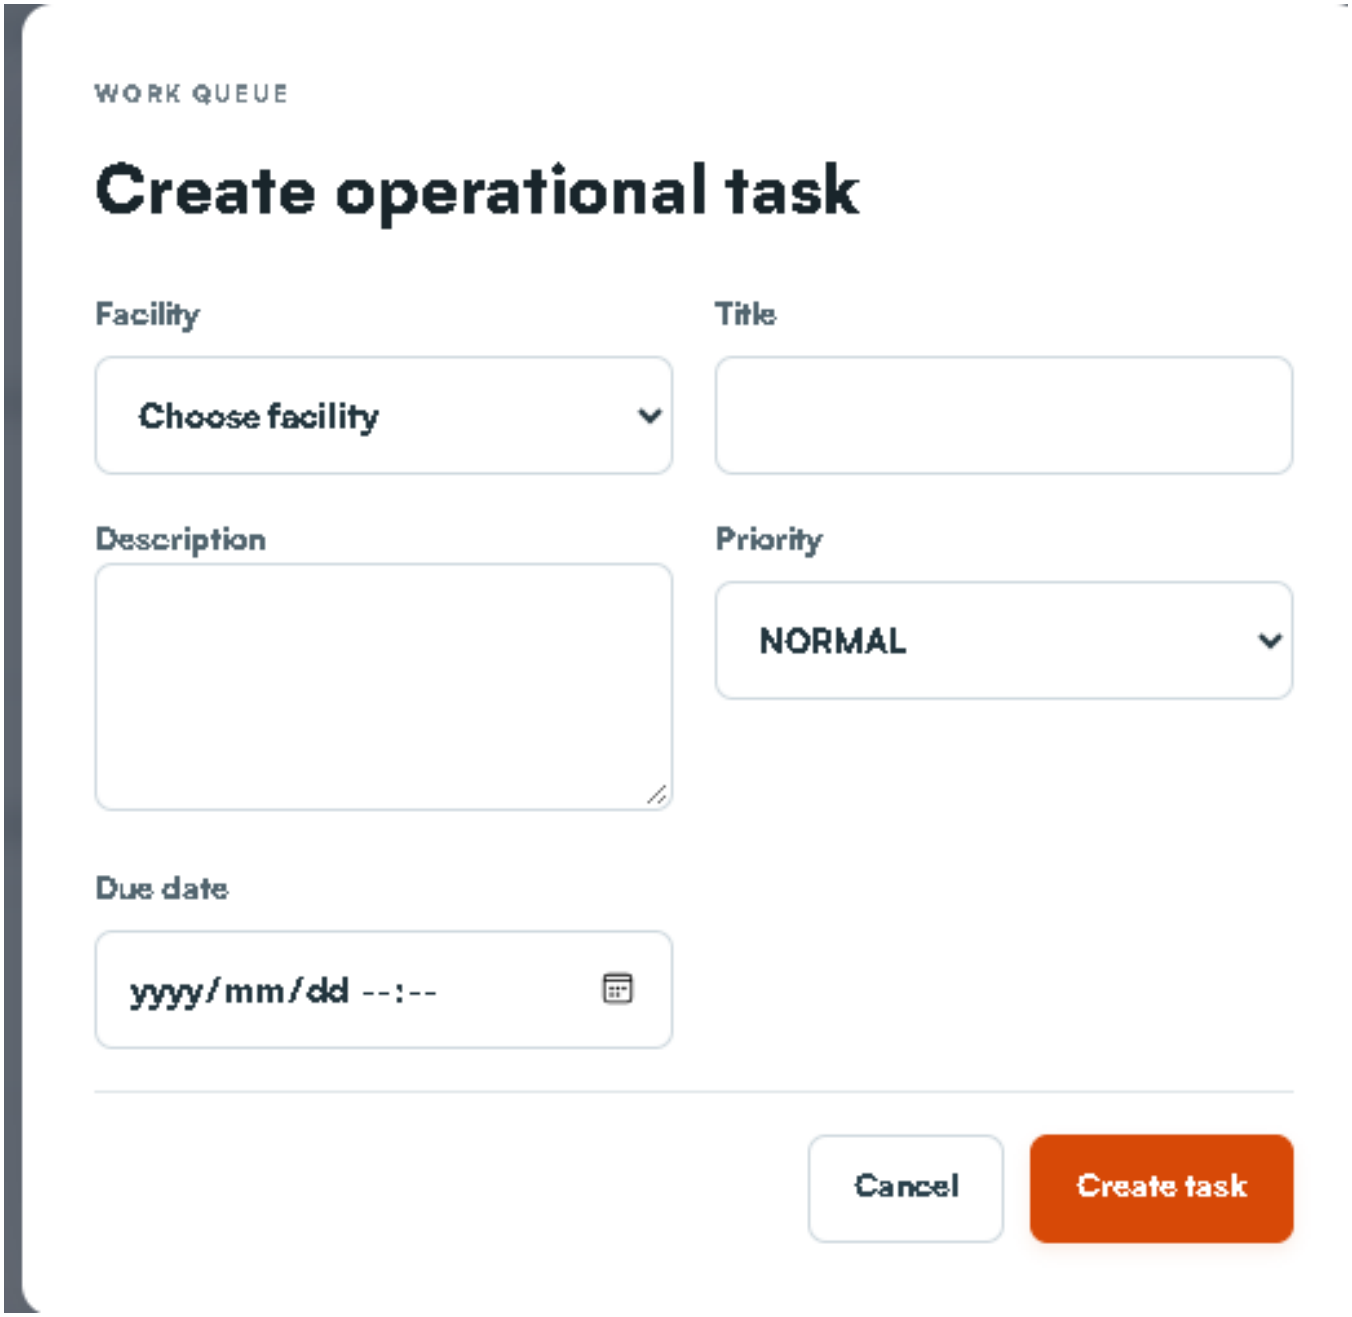

Released Operations dashboard, actual-component verification with sample data, 16-17 October. Counts are illustrative; check your own current scope and snapshot.

Create and complete a site task

Use this for a real operational action that another person can understand and complete. Open Operations and choose New task.

Field	How to use it
Facility	Choose the store where the work must happen.
Title	Use an action and location, for example Inspect corridor lighting.
Description	State what happened, the exact location, required action and who should receive the outcome. Keep customer identity/bank data out.

Field	How to use it
Priority	Choose LOW, NORMAL, HIGH or URGENT according to the actual operational urgency.
Due date	Enter the agreed date/time if needed. Check the local date and time before saving.

Live complete New task form. Cancel leaves without creating a task.

• Review the store title description priority and due date. Choose Create task once.

• Find the saved task in Assigned operational tasks. Check its store and due time. View request details may provide the related source/customer link.

• Do the actual work and retain any required evidence in the relevant source. Only then choose Complete.

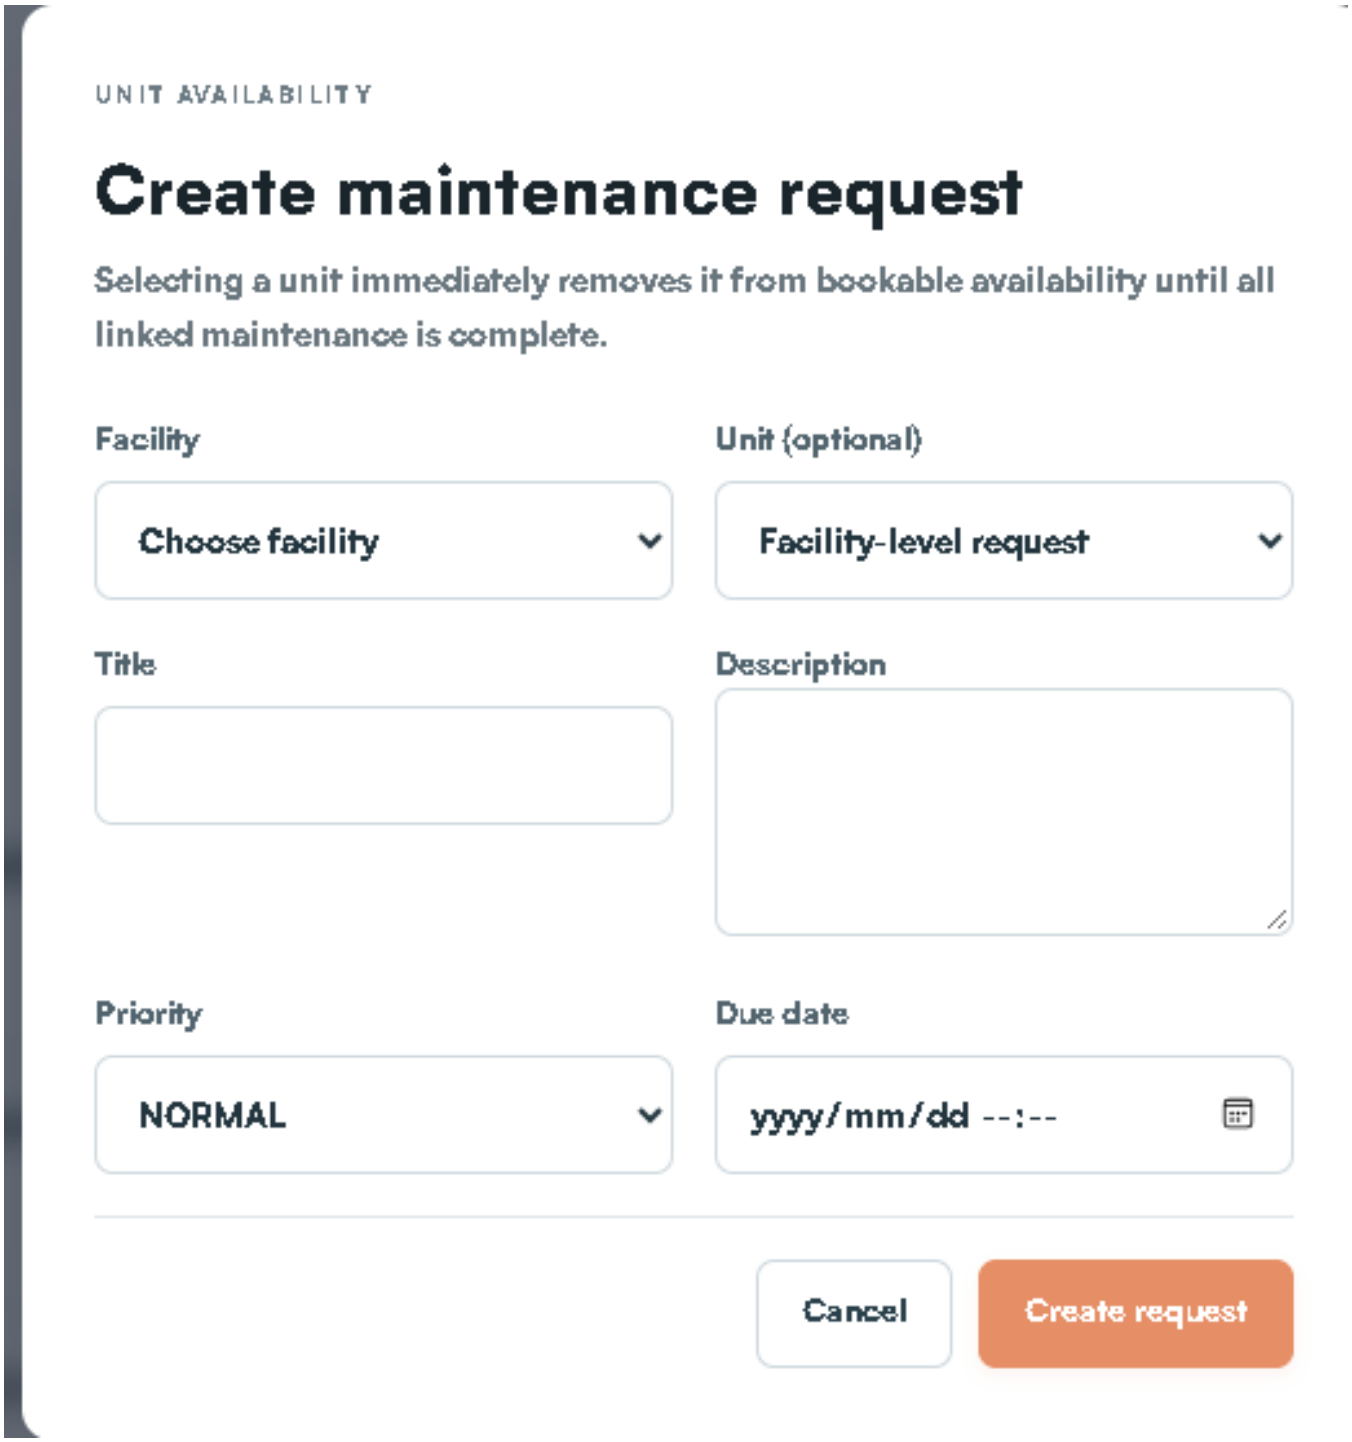

• After an uncertain save/completion, use the displayed Reload and review the saved task before another change. Do not create another task merely because the response was delayed.

Example for training discussion: Inspect corridor lighting, Store 1 - Midpoint, describe the location and observed fault, agree the priority/due time. This example is not an instruction to create a live practice record.

Report and resolve maintenance

In Operations, find Maintenance queue and choose New request. Check the store and whether this is a unit fault or a shared facility issue before saving.

Field	How to use it
Facility	Select the correct store first.
Unit (optional)	Choose the affected unit, or Facility-level request for a shared-area fault. Selecting the unit changes bookable availability.
Title	Name the specific fault and location.
Description	Record the observed condition, impact and required remedy. Use factual wording.
Priority and Due date	Set the actual urgency and agreed response target.

Live complete maintenance form. The unit-selection availability warning is part of the real workflow.

• Select Create request only for an actual fault. A selected unit is removed from bookable availability while linked maintenance remains open.

• Locate the saved request and confirm the right store/unit/title/priority/due date. A task and a maintenance request are different records.

• Use Start when work actually starts. Use Complete after the real fault is resolved, or Cancel only when the request legitimately no longer applies.

• Reopen the queue and verify the request status and unit state. Other open maintenance may keep the unit unavailable even after one request closes.

• If the system cannot confirm the change, reload and inspect the saved status and availability. Do not force unit availability or repeat the request without checking.

When to stop and escalate

Escalate an unsafe condition through the approved site response procedure immediately. A system priority field does not call a contractor, emergency service or access operator. Do not promise that a request has been attended merely because it was saved.

Read units and the facility map

• Open Units & rates or Facility map from Menu. Select the assigned store and floor.

• Locate the actual unit number and compare its position size type and displayed status with the physical site.

• View-only use does not authorise rate changes unit deletion wall edits floor duplication or commercial configuration. A drawing is not proof of a bookable physical unit.

• If the map/unit disagrees with the site, create a factual task identifying store floor unit observed issue and who should check it. Ask the authorised owner/inventory person to correct the source.

Prepare a customer arrival

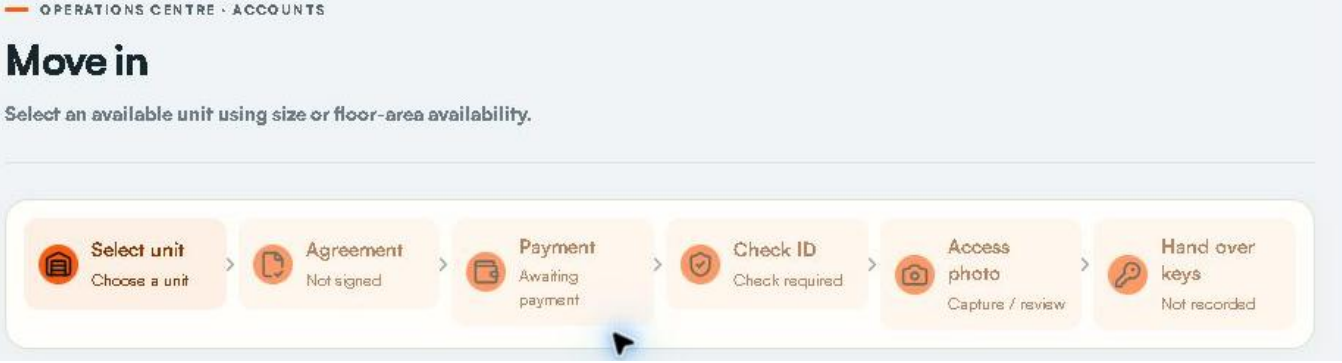

• Ask Faeez to confirm the exact saved booking date store and unit. Do not create a substitute reservation from a phone message.

• Check the unit is physically ready and that unresolved maintenance is recorded. Agree who will meet the customer.

• Review the Expected arrivals card and its current handover checks. Ask the authorised operator to resolve payment agreement identity or access blockers.

• At the actual arrival recheck current readiness. Future planning and cover acknowledgement do not themselves permit keys.

• Complete key handover only under the approved authorised procedure, after the required checks pass and keys are physically released. If your account cannot record that step, the designated operator records the real event.

Live move-in progress for orientation. Each stage is separate; viewing the diagram does not grant the action.

Prepare expected arrivals and weekend cover

Review dated rental arrivals, current handover blockers and named cover before the manager is away.

Who handles this: Facilities manager reviews assigned-store arrivals and accepts actual site cover within the granted operations access.

Faeez handles commercial/customer changes. Ask for the minimum site instructions if customer history is restricted.

Where to go: https://portal.stor24.co.za/operations/arrivals

Before you start

Know the period and the agreed staff cover, including Saturday and Sunday.

1 Choose the period and store

Choose the SAST arrival dates and permitted store, including Saturday and Sunday for weekend cover. Only active rental bookings with agreed arrival dates are listed. Undated active bookings are identified separately so missing dates are not treated as an empty plan.

2 Review the actual handover checks

Each arrival reuses the current booking's identity, signed-document, photo, operational unit and verified receipt checks. Read the blockers. Future arrival dates and test-only payments do not allow keys now; planning an arrival does not grant physical access.

3 Assign a responsible colleague and cover

Choose Assign or update cover, nominate active staff with store access and record the agreed arrival instructions. Saving a new cover or changed instructions clears old acknowledgement. Review customer history and the source move-in checks before confirming the plan.

4 Acknowledge the current arrival plan

The named cover signs in with their own account and acknowledges the current booking and readiness. A date, source, readiness or cover-access change requires review again. If a save is uncertain or a colleague changed the handover, reload the current record before confirming.

Field and control reference

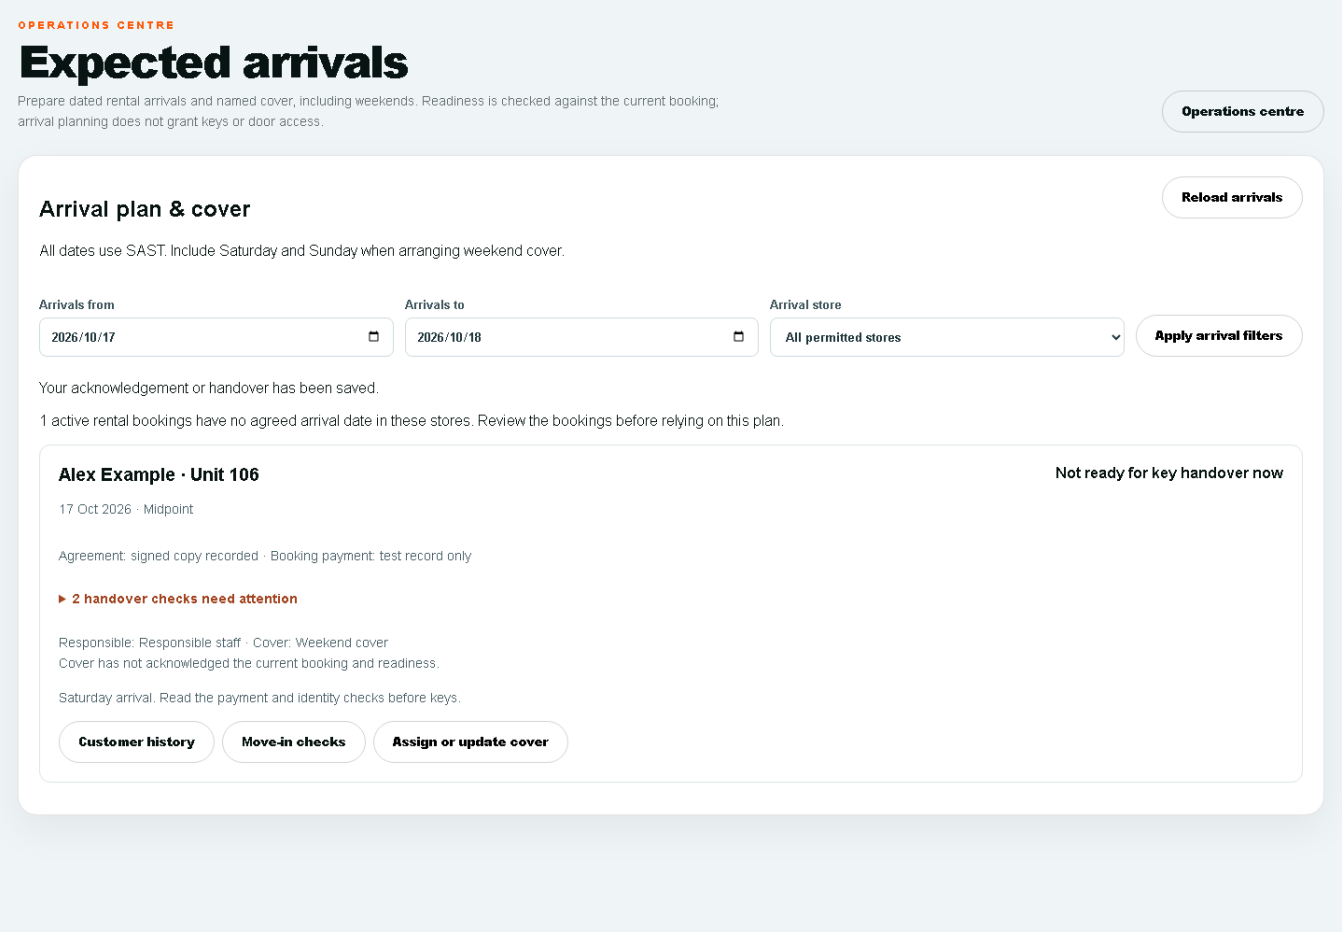

Field or control	What to enter or check
Arrivals from and Arrivals to	Choose the actual cover period in South African dates.
Arrival store	Choose the permitted store and Apply arrival filters.
Arrival card	Read customer/unit/date and expand handover checks needing attention. Planning an arrival does not clear a blocker.
Assign or update cover	Choose responsible staff and cover and record arrival instructions. The new cover reviews the current booking/readiness and acknowledges in their own account.

Check that it worked

The plan retains the agreed staff and acknowledgement for the current booking. At actual arrival, recheck the live payment, identity, agreement, unit/photo and handover requirements.

If something goes wrong

Undated bookings are flagged separately and must be reviewed. A future arrival or a test-only payment does not allow keys today. Changed source/readiness/cover may invalidate acknowledgement.

Fictitious arrival card from the actual component. Unresolved checks remain blockers even when a cover person is named.

Schedule customer follow ups and acknowledge cover

Record agreed appointments in South African time, assign responsibility and acknowledge covering work without changing collection holds.

Who handles this: Facilities manager handles agreed site work and actual covering duties. Faeez owns customer debt terms and commercial promises.

Use your own account to acknowledge your assignment. Assignment alone is not acknowledgement.

Where to go: https://portal.stor24.co.za/operations/followups

Before you start

Obtain the customer's agreement to the appointment, its time and action. An internal desire to chase debt is not an agreed appointment.

1 Read the open appointment queue

Open appointments show the agreed SAST time, customer, store, responsible staff and named cover. Open Customer history to read the exact customer's notes and communications. Load more appointments includes later open pages. Store permissions still apply.

2 Schedule an agreed customer appointment

Choose Schedule follow-up, search and select the correct customer, store, responsible staff and optional cover. Enter the agreed SAST date/time, title and action, then save. An agreed call on the14th stays separate from a payment promise due15th; the debt-chasing hold is unchanged.

3 Hand over to a named colleague

Update cover to nominate an active colleague with access to the store. Only that colleague can acknowledge cover from their own signed-in account. A changed cover clears the previous acknowledgement. Review the original customer history before carrying out the agreed action.

4 Check uncertain saves before retrying

Complete or cancel an appointment after checking its current status. If a save cannot be confirmed, reload and review the recorded appointment before retrying. Stale handovers are rejected rather than overwriting a colleague. A failed reload keeps changes blocked; a lost grant clears the records.

Field and control reference

Field or control	What to enter or check
Find customer by name	Enter at least two characters, choose Search customers and select the exact Customer.
Store	Choose the customer's operational store.
Responsible staff and Covering staff	Choose the actual accountable person and optional cover with store access. Assigning cover is not their acknowledgement.
Agreed date and time (SAST)	Enter the customer-agreed local time. This is separate from a promise-to-pay date.
Appointment title	Choose a standard appointment title, or Other and a clear custom title such as Agreed advance call.
Agreed action and handover details	Record what the customer agreed, what cover must do and any existing promise/hold that must remain in place.

Check that it worked

Save agreed appointment, then confirm the saved title/customer/store/time/responsible person/cover in Open appointments. The named cover uses their own login and Acknowledge cover. A changed handover needs fresh review.

If something goes wrong

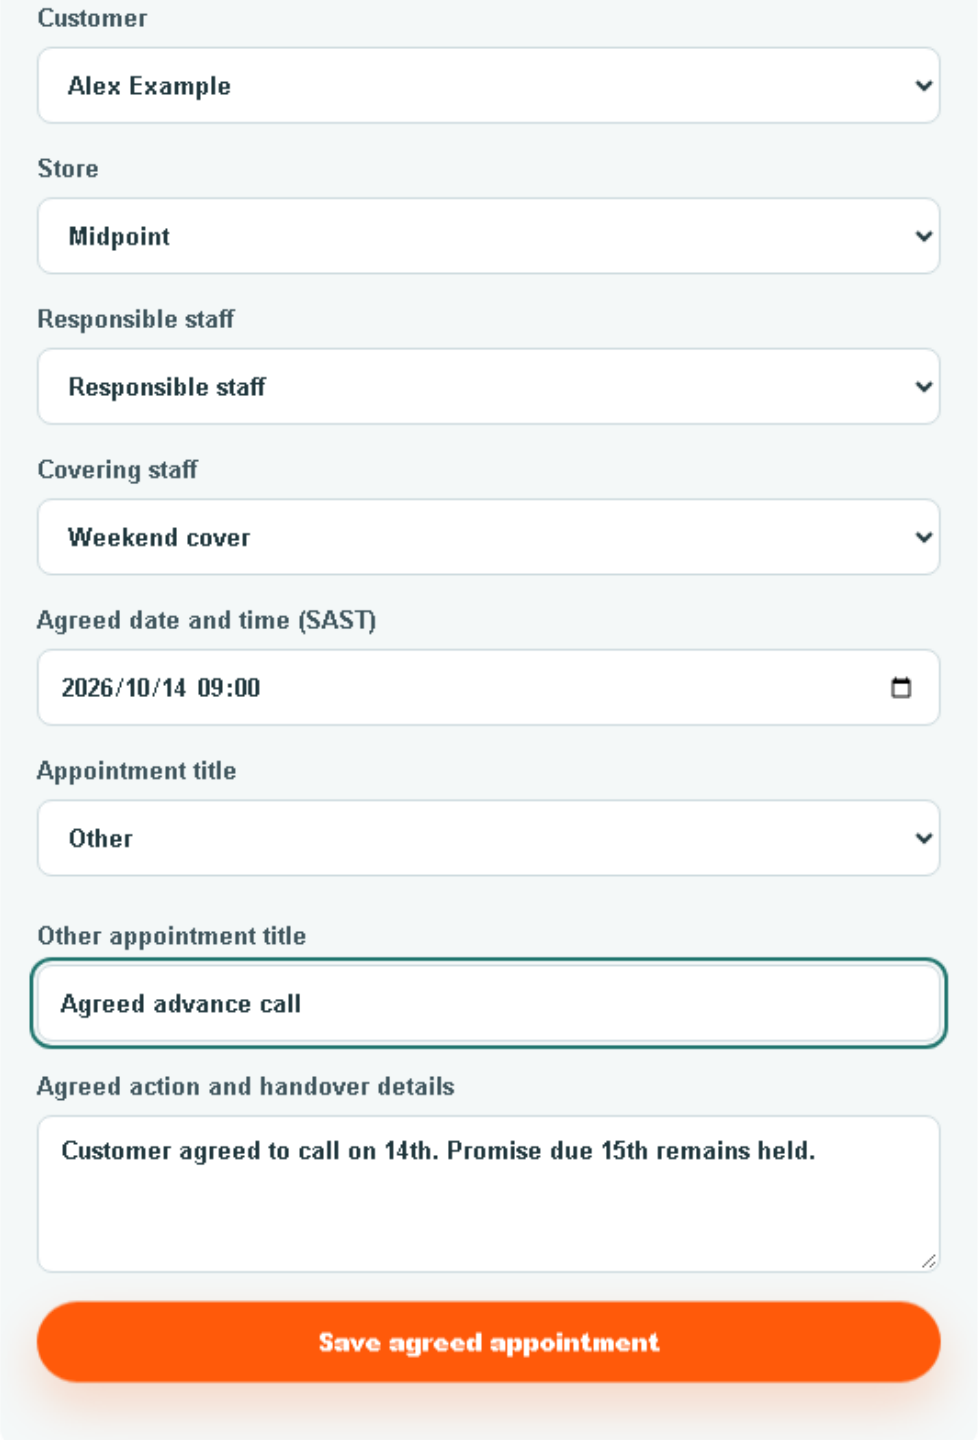

When a save is uncertain, reload and check before retrying. Do not tick Complete until the agreed action occurred. If someone changed the same appointment, reload rather than overwrite.

Use the due queue and edit the saved appointment

Appointment queue offers All open appointments, Due today & overdue and From tomorrow. Choose the queue for the period you are working; the due view uses South African time. Use Load more appointments when offered. Open Edit appointment on the saved card to reschedule, reassign, change the action or revise cover, then Save appointment changes. If someone changed it first, reload and review their version before editing again. Material handover changes need fresh cover acknowledgement. Complete only after the agreed action happened; Cancel only when it no longer applies.

Choose a standard title or preserve a custom one

Appointment title is now a list: Prospect follow-up, Viewing appointment, Move-in follow-up, Customer call, Document follow-up, Payment follow-up, Move-out follow-up or Staff handover. Choose the closest accurate title. Choose Other to enter Other appointment title, from 2 to 160 characters. A previously saved custom title opens as Other and must remain accurate when editing.

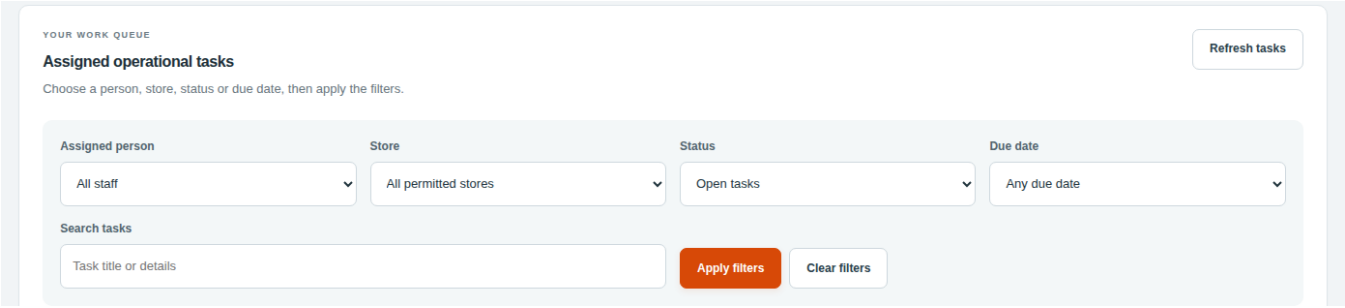

Current title and Other controls in the actual component, with fictitious customer and staff data. Verification capture retained from the title release on 16 October; no live appointment was created for this manual.

Keep the agreed action in Agreed action and handover details. The title does not replace the customer, responsible staff, covering staff or agreed SAST date/time. Review those fields, choose Save agreed appointment once, reload and confirm the saved result. For edits use the appointment edit action, change only the agreed fields and check the new result. Named cover acknowledges from their own account; reassignment alone is not acknowledgement.

Find assigned operational tasks with filters

In Operations, go to Assigned operational tasks. These filters search the permitted task queue. They are separate from the Appointment queue in Follow-ups & handovers and the date filters in Expected arrivals.

Control	How to use it
Assigned person	Choose All staff, Assigned to me, Unassigned or a named colleague. For an unlisted person choose Find another staff member and enter at least two characters of their name.
Store	Choose the assigned store or All permitted stores. Portfolio tasks appear only to accounts allowed that scope.
Status	Open tasks includes active Open, In progress and Waiting tasks. Choose Completed, Cancelled or All statuses when looking for a closed record.
Due date	Choose Any due date, Overdue - open tasks, Today - SAST, From tomorrow or No due date.
Search tasks	Enter part of the task title or details, up to 100 characters. Use a clear unit or task phrase; do not paste private documents.
Apply filters	Applies all current choices. Editing a filter alone does not confirm a new result.
Clear filters	Returns to all permitted staff/stores, open tasks and any due date; clears text/name search.
Refresh tasks / Load more tasks	Refresh the current result, or load another page of the same result. Check Showing X of Y and the update time.

Released task filter controls from actual-component browser verification, 16-17 October, with sample data. Filter labels match the published source checked on 18 October.

Work the record at its source

• Apply Assigned to me, the correct store and Today or Overdue to plan your shift. Read each task title, status, due time and details.

• Open appointment takes you to the agreed follow-up. Complete that appointment there; it is not a generic site task. View request details expands the retained context.

• For an ordinary site task, do the actual work, record the required evidence and then choose Complete. Refresh and confirm its saved status. Completed work may disappear from the Open tasks result; use Completed to find it.

• Load more tasks adds up to the next 25 matching records. A first page is not the full queue. If the queue changed or a result cannot be verified, use Refresh tasks before acting.

• After an uncertain completion, use the displayed status-check recovery. Inspect the current saved record before retrying. An error or expired sign-in is not confirmation of a completed action.

Example: to cover a colleague, choose their name, Midpoint, Open tasks and the agreed period; Apply filters. Read the source appointment and acknowledge only cover assigned to you. Filtering by their name does not reassign their tasks.

Write a useful dated note and handover

For a customer matter, use Customers & tenants, select the exact customer and open History & notes. Choose Add note if your account has that action. For a site-only matter, use an operational task. Do not put bank numbers, identity images, passwords or private signing links in general notes.

Include	Example using fictitious data
What happened	Customer asked for a Saturday arrival.
What was agreed	Arrival is expected at 09:00. Payment still needs finance confirmation.
Who acts next	Responsible staff will check the booking; the named site cover will meet the customer.
When	Record the agreed appointment in Follow-ups & handovers, not only in the free-text note.
What remains blocked	Keys remain on hold until the current move-in checks pass.

• Choose the correct note store and category. Record facts, agreed actions and unresolved issues. The system records the author and timestamp automatically.

• Save the note, refresh the customer and confirm the text/category/author/SAST time. Have covering staff locate the same note through their own permitted account.

• Correct a dated note by adding another note that explains the correction. The older editable profile summary is not the same as the dated note history.

• A shared note does not schedule an appointment or prove that cover acknowledged it. Create or update the linked handover and check the acknowledgement separately.

If customer history or Add note is unavailable, ask Faeez to retain the customer note. Keep your site task factual and limited to the work you are responsible for.

Read booking and move in events

Read recorded booking stages and acknowledge only your own event inbox without sending a message or granting access.

Who handles this: Review store operational events and your own read acknowledgement.

A booking or signed-agreement event does not establish paid arrival or physical key collection.

Where to go: https://portal.stor24.co.za/operations/events

Before you start

Open the inbox as yourself. Its unread status belongs to your account.

1 Read the source stage

The store event inbox lists booking creation, recorded signed agreements, move-in starts and explicit key-handover audit records. These are separate stages. A booking or signed document does not establish a verified payment, physical key collection or active door access.

2 Open the customer history

Use Customer history to open the exact customer and read staff notes and recorded communications before acting. Events show their store, unit where recorded, and SAST timestamp. Only stores in your current operations permission are included.

3 Acknowledge for your own account

Mark an event as read only after reviewing it. The acknowledgement belongs to your signed-in account; another colleague still has their own unread state. Changed source evidence needs a fresh read. Acknowledgement sends no email, WhatsApp or SMS and grants no financial or access approval.

4 Reload and review older records

Use Older events for later pages and Latest events to return to recent records. If confirmation is uncertain, reload and check your recorded read state before retrying. A failed source read is an unavailable queue, not proof that no events exist.

Field and control reference

Field or control	What to enter or check
Event stage	Distinguish booking created, recorded signed agreement, move-in started and actual key-handover audit event.
Customer history	Open the exact customer history to understand the next action.
Mark read	Mark read only after reviewing the event. This acknowledges your inbox; it does not send a staff/customer message.

Check that it worked

Your read status is retained after reload and the underlying booking remains unchanged.

If something goes wrong

An event is evidence of its stated stage only. It is not proof of payment, active door access, another employee's acknowledgement or a delivered manager alert.

Plan work with the calendar

Read tasks, agreed follow-ups, viewings, expected rental arrivals and move-outs in SAST.

Who handles this: Use the calendar as a planning view and open the source record for changes.

Use Expected arrivals for rental arrival/cover checks rather than assuming a calendar entry proves readiness.

Where to go: https://portal.stor24.co.za/calendar

Before you start

Choose the actual date range and store for the work you are planning.

1 Read the scheduled work

Calendar groups facility-scoped tasks, lead follow-ups, viewings, expected rental arrivals and scheduled move-outs by day. Times use South African time. An expected arrival still needs current handover checks; an empty day does not establish that every operational task is finished.

2 Open the source record

Choose an item to open its linked workflow. Check customer, facility and due time before acting. This calendar is a linked view; it does not offer drag-and-drop rescheduling or a general appointment creation form.

3 Create or resolve work at its source

Use Operations > Customer follow-ups and covering-staff handovers for an agreed customer appointment with responsible staff and cover. Use Expected arrivals for dated rental bookings and weekend preparation. Complete or update work at its source, then revisit Calendar; reading guidance does not clear entries or grant keys.

Field and control reference

Field or control	What to enter or check
Scheduled item	Read its source type, time, customer and staff owner.
Source record	Open the actual source workflow to change the action. Calendar is an overview, not a universal editor.
Appointments and arrivals	Use Follow-ups & handovers for agreed appointments and Expected arrivals for rental arrival readiness/cover.

Check that it worked

The planned item has the correct next action in its source and the covering person knows what they must do.

If something goes wrong

A calendar entry does not clear a payment/identity/access blocker or establish the customer attended.

Counter tablet and shared device care

• Keep customer use on the public Counter journey and staff work on the staff device. Ask Faeez to prepare the correct store visit.

• The customer supplies and verifies their own contact details and signs their own agreement. Do not sign or enter acceptance on their behalf.

• After a visit use the approved clear/end-visit process and verify the previous customer cannot be reopened from the tablet.

• Do not store identity images or private signing/payment links on a personal phone. Sign out of staff accounts before handing over a shared device.

• Real Android installation camera scanning privacy clearing and reconnect behaviour must be checked on the actual equipment. A browser screenshot does not perform device setup.

Stock goods and customer collections

Check the actual product and quantity against the authorised order. A product list is not permission to alter selling prices, adjust stock or mark an order supplied. Release goods only through the permitted paid-order and physical handover process. Payment review means investigate first. A stock return does not issue a refund. If stock work is outside your assigned access, pass it to the designated operator.

Seven calendar days and access restriction review

The agreed rule is seven calendar days. EFT and card use the approved due date; debit order uses authoritative confirmed failure. Pending or uncertain payments hold review. The trigger is an internal Access restriction review task. Financial approval and any authorised physical restriction remain separate.

A review task is not an instruction to lock a door, suspend an access credential, charge a fee or release keys. Give the case to the authorised collections and access operators. Record only factual site observations and the agreed next person/action. Completing a generic task does not record restriction approval or a successful gate command.

If asked to act at the site, check the current authorised instruction and access-provider procedure first. Report uncertainty or conflicting payment evidence to Faeez/finance. The fee amount remains unset pending Liezl/Mark. No default fee is authorised by this manual.

Weekly review and shift handover

Review	What to leave for the next person
Open tasks	Current status actual action next responsible person and due time.
Maintenance	Affected store/unit real condition next contractor/staff action and remaining availability restriction.
Weekend arrivals	Both days checked booking readiness named cover and current acknowledgement.
Keys and access	Actual physical handover or issue and the authorised operator who must act.
Device issues	Equipment affected time safe error and whether the previous customer/session is cleared.

Before leaving, confirm the next person has the actual handover, not only that a note was saved. Sign out and secure keys/equipment through the approved site process.

Exceptions and recovery

Situation	What to do next
Save result is uncertain	Stop and reload the saved record. Look for the original reference before retrying.
Another person changed the record	Reload the current version and agree the next action. Do not overwrite blindly.
Access restricted	Record the task screen and store and ask the owner to review access. Continue with available work.
No records match	Check date store status and search filters. Confirm the snapshot age.
Payment or signature missing	Retain the existing booking reference and use its supported recovery route. Do not create a substitute record.
Export blocked	Use the safe reason/request reference. Do not copy blocked content through another screen.
Message outcome uncertain	Check the exact customer channel reference and provider state before any separately authorised retry.
Unit stays unavailable	Review remaining reservations occupancy and maintenance; do not force the status.
Unexpected customer information	Close the record and report the store/scope issue to the owner. Do not download it.

Outage and device recovery

Browser online describes the browser connection. It does not prove provider, gate or payment availability. If the system fails, record the time, store, affected task and safe error text. Follow the approved site/customer escalation procedure. Do not repeat financial or messaging actions while their result is unknown.

Offline work requires a prepared, authorised encrypted snapshot and a tested unlock/reconnect process. Missing or expired snapshots are not usable readiness. Counter signing and payment are not an offline completion route. On reconnect, inspect queued work and conflicts before repeating capture.

Training already passed and what remains

The recorded acceptance includes basic customer history and notes, three-format history downloads, follow-up scheduling/rescheduling/reassignment/cover/completion, sign-in and Midpoint opening. Basic event, arrival and payment-review workflows were reported passed by the coordinator. Keep those accepted results; use the exercises below only for onboarding or an untested changed step, rather than repeating passed general tests.

Remaining check	Responsible handover
Finance and pricing	Representative original bank evidence, receipt correction/matching, independently approved allocation and price proposal/approval/customer acceptance.
New email history and staff alerts	New-message source/history checks; named recipients, approved timing and actual receipt after separately authorised activation.
Arrears	New review-task staff practice; legal/provider/fee/extra-channel and independent approval/execution work described in the collections chapter.
Data and reporting	Representative location save/reload and quote/payment reconciliation; missing historic data remains unknown.
Devices and site	Counter tablet procurement/setup, full real-device/customer journey, camera/laptop/offline/reconnect checks and physical handover practice. Android installation/sign-in/Midpoint were reported passed, with remaining edges still open.
Incoming manager and training	Manager onboarding planned for 1 November, actual limited account practice and role-specific teach-back; no person name is needed to use this manual.
Performance and final sign-off	The isolated workload/pool fix is released; peak operational acceptance and paused financial stress work remain separate. Sign off only the proven scope of each original meeting item.

The 23 meeting requirements are not all operationally closed. A software release, this updated manual or a test screenshot does not close an unresolved finance, provider, source-data, device or human acceptance gate.

Training exercise checklist

• Find your assigned store, the unit/map and actual tasks.

• Create and complete a site task on approved practice data.

• Explain the availability effect of a unit maintenance request and verify its status after a permitted change.

• Review a weekend arrival and explain every unresolved handover check.

• Acknowledge assigned cover using your own account.

• Give an end-of-shift handover that names the next action and person.

• Demonstrate a blocked action and explain how to escalate without using another login.

Use owner-approved training or isolated data for practice. Do not use real customers for sample financial postings, messages, signatures or access changes. Record trainer, learner, date, store, observed result and any follow-up. The manual is the instruction document; staff acceptance is a separate training record.

Glossary

Term	Meaning
Customer	The individual or business record.
Lead or enquiry	The storage need and next sales action.
Reservation or hold	Time-limited protection of a unit.
Agreement	Saved terms and signature evidence.
Tenancy and account	The occupancy relationship and its financial record.
Receipt	Recorded actual confirmed funds on the correct account.
Mandate	Authority for a payment method, rather than proof of funds collected.
Promise or dispute hold	A case arrangement affecting collection follow-up eligibility.
Acknowledged cover	The named covering colleague reviewed the current handover through their own account.
Source record	The actual booking account task or provider evidence behind an overview.

Edition and verification notes

Edition 3, 18 October 2026, release-evidence cutoff 09:00 SAST. This replaces edition 2 for daily reference and preserves its role-specific procedures. Updates cover the released Operations dashboard, task filters, appointment editing/titles and Start here guide, governed quote and receipt-allocation workflows, finance/scheduler handovers, expanded history/reporting and explicit seven-calendar-day review-task preparation. Timed review work still under release review at the cutoff is held separately.

Checked against published CRM main 78d819bf648749a2f1634188ee6d72f78ce2090e, the current original 23-item register, recorded REA/Faeez chat results and their dated release evidence. The 17 October authority record reports Faeez active with 29 grants and a restricted Midpoint assignment, including move-in creation; it is a dated observation, not a new permission change. The manager manual assigns duties without claiming an account has been provisioned.

Screenshots labelled 15 October are retained live empty forms or owner views from edition 2. New Operations/title screenshots are retained actual-component release-verification captures with sample data, dated 16-17 October. The browser returned to sign-in on 18 October, so no fresh authenticated screen or own-account verification is claimed. Current source controls were compared with the retained images. No customer, financial, communication, signature, access, permission or provider record was submitted during this manual update.

Both PDFs were rendered and inspected, with contents/bookmarks, text extraction, page bounds, source dates and screenshot references checked. This document does not prove inbox receipt, settlement, physical access or staff acceptance. The Operations Staff handbook PDF button still serves the separate 15 October 23-page handbook at this cutoff; it has not been replaced by creating these two new manuals. Use the edition-3 files supplied with this release for the role-specific update.
